LOGSTOR

LOGSTOR comprises production companies in Denmark, Poland, Sweden, and Finland as well as sales companies and service units in all major markets worldwide

Worldwide service

The fact that LOGSTOR is operating in accordance with the same strict internal and international guidelines everywhere ensures uniform products with high quality as well as uniform guidelines for the installation and use of our products all over the world.

A central management of product data, specifications, marketing, installation instructions and user manuals ensures a uniform understanding and use of our products worldwide.

Technical service

LOGSTOR is a system supplier. Part of the system is Technical service before, during and after the implementation of a project.

LOGSTOR's know-how is to the benefit of all parties on system choice, system optimization, design, training, installation, taking into operation and maintenance. To the benefit of the total economy of the project and of the safety for customers and consumers.

Training

LOGSTOR has an extensive training program for new employees which ensures that our staff will at any time be able to answer questions concerning the use of our products.

Due to the introduction of new techniques, new environmental demands etc. the traditional, preinsulated pipe system has developed into a rather high-technological product.

It is therefore extremely important to handle this product correctly, not only in order to ensure the best possible economy of the individual products, but also in consideration of the environmental impact on our mutual global future.

LOGSTOR continuously carry out training courses at our Academy for the people who are to work with the system, comprising decision makers, consulting engineers, contractors, pipe and joint fitters, supervisors, quality controllers, operation staff and of course the employees of LOGSTOR.

Development

LOGSTOR focuses on product and process development on the basis of our products being long-term investment goods and the lowest service life costs being of vital importance to our customers.

The Product Catalogue

Documentation

LOGSTOR's documentation consists of:

- Design manuals (single pipe and TwinPipe)
- Handling & Installation
- Weld Joint Manual
- The surveillance manual LOGSTOR Detect
- Foam pack folders (single pipe and TwinPipe)

The Product Catalogue

The Product Catalogue is a tool, serving the following purposes:

- Enable decision makers to choose the system and the products suitable for their demands and requirements by reading the general descriptions.
- Enable purchasers, consultants, order managers and customers in general to find general information about a specific product.

All product pages are structured in the same way, which facilitates finding the same kind of information about more products.

Application: What is the product useful for and under which conditions?

Description: What does the product look like, which parts does it consist of?

Materials: Which materials is the product made or composed of?

Component No./measurements: What component Nos. - which principal measurements?

Accessories: If the product requires accessories of one kind or another, it is stated here.

References: Contains references to relevant sections with additional information in this catalogue and the two other manuals.

The Product Catalogue and manuals are independent works. Consequently, the numbering of the volumes lacks coherence.

References to European standards must be perceived as references to the latest revision, provided nothing else is explicitly stated.

General

The Product Catalogue

Use of the Product Catalogue

No part of this catalogue may be reproduced for external use without the express written permission of LOGSTOR.

The information/instructions are general. Application and implementation must take place with due respect to local conditions.

Additional/specific information can be achieved from our technicians.

All rights reserved. The English version of the LOGSTOR catalogue is the master/pattern copy whereas the other versions are translations. The English version shall always prevail in case of any discrepancy or inconsistency between the linguistic versions.

The information in this document is subject to change without notice.

The latest edition will always be available on www.logstor.com/Documentation.

LOGSTOR reserves the right to change or improve its products and to make changes in the contents without obligation to notify any person or organization of such changes.

LOGSTOR is a trademark which may not be used without the express written permission of LOGSTOR.

Quality control and environmental management

Introduction	<p>Order processing and production of products take place in accordance with a quality and environment management system, which i.a. contains LOGSTOR's quality and environment policies. The system is administered by the local Quality and Environment Department, which is an independent staff function.</p> <p>The Quality Department is authorised to stop production or delivery of products which do not comply with the established specifications.</p>
Certification ISO 9001	<p>The quality management system is prepared and certified in accordance with ISO 9001:2015.</p>
Quality Manual	<p>The quality management system is documented in quality manuals for each company/country. The quality management system includes:</p> <ul style="list-style-type: none"> - Policies and objectives - Organisation charts - Procedures and instructions for processes, affecting the quality. They cover administrative and production processes e.g. order processing, inspection etc. - Process and inspection plans
Inspection routines in the production	<p>The production of the pipe systems is subject to extensive inspection routines.</p> <p>This ensures the compliance with established standards and specifications and a homogeneous, high production quality, irrespective of the place of origin, which are conditions of a dependable system with a long service time.</p> <p>The inspection routines are described in the process and inspection plans which include receipt of raw materials and semi-products, qualification test, the production process and finished products.</p>
External inspection	<p>LOGSTOR's preinsulated pipes and fittings are i.a. certified in accordance with the Euroheat & Power, EHP Certification guidelines.</p> <p>This means that production processes and products are subjected to type test and control, based on valid EN standards. It is verified at annual inspection visits at which test results are examined and product samples are taken for external testing.</p>
Documentation for the customers	<p>Steel pipes and fittings, granulate for outer casings, polyol and isocyanate for PUR are ordered with a 3.1 certificate which LOGSTOR files for at least 5 years.</p> <p>Normally, the customer does not receive documentation of the delivered products. However, the customer may according to a previous arrangement order documentation of delivered pipes and fittings for each order.</p>
Identification	<p>The marking on casings complies with the requirements in the European standard EN 253.</p>

Quality control and environmental management

Environment ISO 14001	Compliance with environmental requirements, optimization of resource consumption and minimization of environmental strains are ensured by means of an environmental management system, based on the environmental management standard ISO 14001:2015.
Reference	To see all relevant LOGSTOR certificates visit: www.logstor.com/certificate .
Reference to European standards	References to European standards are references to valid versions of the European standards.

Waste treatment and recycling

General	When installing a new preinsulated pipe system or replacing parts of an old pipe system, different types of waste materials shall be treated according to below instructions or local regulations
Preinsulated products	First PUR-foam, PE-casing, service pipe, surveillance wires shall be separated.
PUR foam	If possible, the PUR-foam shall be reused or burned at a waste incineration plant under controlled conditions according to local regulations.
HDPE-material	HDPE-material can be regranulated and recycled.
Service pipe	<p>Steel pipes:</p> <p>If possible, steel pipes shall be reused or melted down and then recycled.</p> <p>Copper pipes:</p> <p>If possible, copper pipes shall be reused or melted down and then recycled.</p> <p>Multilayer pipe PE-RT/aluminium/PE-RT:</p> <p>Separate the layers.</p> <p>Aluminium and PE-RT can be reused.</p> <p>PEX:</p> <p>PEX shall be burned at a waste incineration plant under controlled conditions according to local regulations or be recycled in a chemical recycling plant.</p> <p>PE-RT:</p> <p>Separate the layers.</p> <p>PE-RT and aluminium can be reused.</p>
Surveillance wires and cables	<p>Copper wires:</p> <p>Copper wires can be melted down and recycled.</p> <p>Plastic-coated surveillance wires and cables:</p> <p>Plastic-coated surveillance wires and cables are handled in accordance with local regulations about handling electric surveillance wire and cable waste.</p>
Cross-linked material	Cross-linked material shall be burned at a waste incineration plant under controlled conditions according to local regulations.

Waste treatment and recycling

Valves	If possible valves shall be reused. Valve parts which cannot be reused shall be treated as waste in accordance with local regulations.
Electronic components	Electronic components like detectors, connecting boxes i.e. shall be treated as electronic waste according to local regulations.
Chemicals	<p>If possible, polyurethane and isocyanate shall be reused otherwise they shall be treated as chemical waste in accordance with local regulations.</p> <p>Alternatively foaming is done under controlled conditions according to regulations and the PUR foam is handled as stated previously</p>
Brass couplings	Brass couplings can be melted down and recycled.

The Bonded Single Pipe

General

Application

The pipe system is a complete transmission and distribution system for district heating.

In general the bonded pipe system from LOGSTOR complies with the European standards EN253, EN448, EN488, EN489, EN13941, EN 17415-1, EN17415-2, EN17415-3 and EN14419.

All specifications in section 2 of this catalogue are based on:

Service life = min. 30 years.

Max. operating pressure = 25 bar. The pressure class for large T-pieces and bends of standard design may however be lower.

The pipe system fulfills the requirements of EN 253 as well as EN 13941 for continuous operation with hot water at various temperatures up to 120 °C and at individual time intervals with a peak temperature up to 140 °C. The sum of these individual time intervals shall, in average, not exceed 300 hours a year.

For temperature profiles which deviate from above standards we can - on request - calculate the estimated service life on the basis of the actual expected temperature set during a year.

Please contact LOGSTOR, if your conditions differ from the limit values in EN 253.

Description

A preinsulated pipe consists of:

1. Service pipe made of steel
2. Insulation made of polyurethane foam
3. Outer casing made of polyethylene, HDPE
4. Two 1.5 mm² copper wires for surveillance. One wire is tinned
5. Pipe label

The Bonded Single Pipe

General

Production methods

LOGSTOR uses various production methods to manufacture pipes which all comply with EN 253, but still have different insulation properties.

Traditionally foamed pipes are manufactured by injecting the insulating foam between the service pipe and the outer casing, which is produced in another process. In this process one pipe is manufactured at a time. The process applies to all pipe dimensions.

In the axial conti process pipes are made by casting the insulation onto the service pipe in a moving mould, after which the casing is extruded onto the insulation. The production takes place in a continuous process.

An effective diffusion barrier foil, preventing diffusion of insulating gases is embedded between the insulation and the casing.

Consequently, continuously produced pipes with diffusion barrier foil do not age.

The method is used for pipes with casing dimensions $\varnothing 90 - \varnothing 315$ mm.

The total heat loss over a 30 years' period is 10-25% lower than that of a corresponding, traditionally manufactured pipe. The smallest dimensions yield the greatest savings.

In the spiral conti process the insulation is sprayed onto the service pipe or it is cast in a mould around the service pipe, after which the casing is extruded onto the insulation in a spiral movement.

The method applies to casing dimensions $\varnothing 355 - \varnothing 1200$ mm. They are available with diffusion barrier foil as special products.

In the opti production process the pipe is foamed in a mould by injecting foam at 6 positions distributed along the pipe length. Hereafter the casing is extruded onto the foam in a spiral movement. The method applies to casing dimensions $\varnothing 355 - \varnothing 1400$ mm. The smallest steel pipe dimension is $\varnothing 406$ mm.

Steel pipe

Dimensions and tolerances:

According to EN 253 and EN13941.

Standard pipes:

Longitudinally or spirally welded P235GH according to EN 10217-2 or EN 10217-5.

Inspection certificate:

EN 10204 - 3.1

Bevelling:

Wall thickness $S < 3.2$ mm is supplied with straight ends.

Wall thickness $S \geq 3.2$ is supplied with bevelled ends in a 30° angle, root face $1.6 \text{ mm} \pm 0.8 \text{ mm}$. EN10217-2 option 10 or EN 10217-5 option 7.

Surface quality:

Prior to foaming the pipe make sure that the surface of the steel pipe is of a quality, which guarantees an optimum adhesion between pipe and insulation.

The Bonded Single Pipe

General

Insulation

Polyurethane foam:

Properties: Minimum as required in EN 253.

Blowing agent:

Cyclopentane.

Thermal conductivity:

- Traditionally manufactured pipes (50°C): 0.027 W/m K.*)

- Axial conti pipes (50°C): 0.023 W/m K.*)

- Spiral conti pipes/opti pipes (50°C): 0.025 W/m K.

*) These lambda values are based on an average of the continuous internal and external λ -measurements.

The updated values are always included in the calculation program "Calculator".
See www.logstor.com/Calculator.

Outer casing

Polyethylene:

HDPE, bimodal (Minimum PE 80, ISO 12162).

Properties: Minimum as required in EN 253.

All parts are fully weldable within the melt flow index:

MFR variation ≤ 0.5 g/10 min.

Thermal stability:

Oxydation induction time (OIT): > 20 min. at 210° C.

Resistance against crack formation: Slow crack formation (notch sensitivity) > 300 h (notch, 4 MPa, 80°C, EN 253).

Internal surface treatment:

All traditionally produced outer casings are corona-treated during production. This ensures an optimum adhesion between outer casing and insulation. As for conti pipes the adhesion is ensured by a corona-treated PE foil between the casing and the foam.

Finished pipes

Free service pipe end: 220 ± 10 mm

Lengths delivered: 6, 12, and 16 m

The Bonded Single Pipe

General

Surveillance system

The pipes are supplied with 2 copper wires, embedded in the insulation, Nordic System.

Wires:

1.5 mm² copper wires (one is tinned)

Distance to steel pipe:

15 mm. -5/+40 mm dependent on dimension and type of pipe.

Position in top:

± 3-20 cm from 12 o'clock position

The embedded copper wires are the backbone of the electronic surveillance systems which is available for most of our pipe systems.

See description in the Surveillance Handbook.

The Bonded Single Pipe

Pipe - Overview

Description	This section contains a description of the preinsulated single pipes which LOGSTOR offers.
Contents	District heating pipes - Insulation series 1 District heating pipes - Insulation series 2 District heating pipes - Insulation series 3 District heating pipes - Zebra pipe
Alternatives	Pipes in other dimensions and according to other specifications can be delivered as special orders.

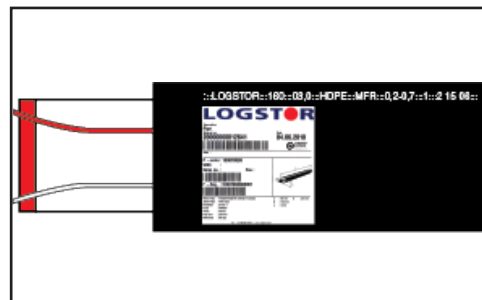

The Bonded Single Pipe

District heating single pipe

Description

All preinsulated pipes are delivered with embedded copper wires for surveillance.

Single pipes in outer casing 90 - 315 mm are available with diffusion barrier in 12 and 16 m length.

The Bonded Single Pipe

District heating single pipe - Zebra pipe

Application	Zebra pipes are used to facilitate the removal of insulation when adjusting pipe lengths.	
Description	<p>Depending on the length of the pipe the zebra pipe is divided into sections of 0.5 - 1.5 m, marked with transverse tape.</p> <p>Every second section has no adhesion between the insulation and the service pipe. These sections are marked with longitudinal tape.</p>	
Dimensions	<p>The zebra pipes, which traditionally are foamed pipes, are available in 12 m length.</p> <p>The dimensions of insulation series 2 and 3 are the same as for straight pipes.</p> <p>Max. steel pipe dimension is \varnothing 508 mm.</p>	
Component overview/data	Component No. 2490	
Materials	Zebra pipes are produced according to the same specifications as other straight pipes.	

The Bonded Single Pipe

Expansion and anchoring - Overview

Description	This section is a description of the expansion and anchor elements, employed in connection with one or more of our installation methods.
Contents	E-Comps Foam pads Anchors

The Bonded Single Pipe Expansion and anchoring - E-Comp

Application

The E-Comp is a compensator which operates only once and is used in pipe systems, where temperature variations are absorbed as stresses in the steel pipe instead of being converted into expansion movements.

Description

E-Comps are designed for a max. operating pressure of 25 bar (37.5 bar test pressure at 20°C).

Max. design temperature: 130°C.

E-Comps are designed for 250 full load cycles in project class B up to and including DN300 and project class C for larger dimensions according to EN13941-1.

L is the length of the E-Comp in compressed state.

e_{\max} is the highest compression length.

E-Comps in major dimensions are made to order.

On request E-Comp can be delivered pre-adjusted via component No. 4150

Component overview/data

Component No. 0006

110-160	500	100
200-315	1000	100
355-450	1500	100
500-630	2000	100
710	2500	50
≥ 800	3000	50

The Bonded Single Pipe
Expansion and anchoring - Foam pad

Application Foam pads are used for partial absorption/distribution of expansion movements.
The application is restricted to first time expansion movements of max. 84 mm and a max. continuous surface temperature of the outer casing of 50° C.

Description The foam pads are available in one size which is adjusted to the actual casing diameter.
Product No. 7000 2000 005 001.

The casing diameter determines the height of the foam pad.

Component overview/data Component No. 7000
Foam pad

Deformation, %	Compressive strength, kPa
40	60 ±15%
50	90 ±15%
75	275 ±15%

Materials Foam pads are made of polyethylene foam with closed cells. Non-decomposable.
Thermal conductivity: λ (50°C) = > 0,05 W/mK
Delivered as type 2 after EN 13941-1 with the properties which appear from the table.

The Bonded Single Pipe
Expansion and anchoring - Foam pad

Accessories

Component No. 1997
Product No. 1997 0000 016 000
Cross-linked foil laminate to be wrapped around the foam pads to prevent sand from coming between pad and outer casing.
Delivered in coils of 160 m
Width: 1000 mm
Thickness: 5 mm

The Bonded Single Pipe

Expansion and anchoring - Anchor

Application

Preinsulated anchors are used to fix the pipeline for absorption of expansive forces in order to avoid undesirable expansion movements.

Description

Preinsulated anchor.

Max. operating pressure: 25 bar

Max. axial tension on the anchor plate corresponding to a differential stress of 150 MPa from the two sides.

All preinsulated anchors are delivered with embedded copper wires for surveillance.

If you consider using anchors in major dimensions or with major stresses, please contact the Technical Department with specific project information.

The Bonded Single Pipe Expansion and anchoring - Anchor

Materials

Pipe part: Like straight pipes: P 235 GH/PUR/PE-HD

Flange: Coated steel, S 235 JR.

Inner skirt: Stainless steel

Preinsulated anchors are produced according to EN 448.

The Bonded Single Pipe

Casing joints - general

Joints	<p>LOGSTOR supplies three different casing joint types:</p> <p>Weld joints</p> <p>Cross-linked shrink joints</p> <p>HDPE shrink joints</p> <p>All casing joint types have been tested and approved according to EN 489.</p>
Weld joints	<p>LOGSTOR has two weld joint types:</p> <p>The BandJoint, which is an open weld joint, installed after the steel pipe has been welded together.</p> <p>The BandJoint has integrated copper wires in the welding zone.</p> <p>The EWJoint, which is a closed HDPE shrink joint, which are pre-installed, before the steel pipe is welded together.</p> <p>Weld strips are delivered separately and is installed just before the joint is to be shrunk.</p> <p>Weld joints can be used in all soil types - also when the groundwater table is more than 0.5 m over the pipes e.g. crossing streams and in oil-polluted soil as well as strongly acid soil, bacterially active dumps and lake or sea deposits.</p> <p>When crossing rivers, harbours, lakes or the like it is recommended to install a double EWJoint. Please contact our Technical Department.</p>
Cross-linked joints	<p>Closed shrink joints, which are pre-installed, before the steel pipe is welded together.</p> <p>Available for foaming or with insulation shells.</p> <p>Foam holes are sealed with weld plugs.</p> <p>Cross-linked joints can be used in all normal soil types, where the groundwater table is constantly less than 0.5 m over the pipes.</p>
HDPE shrink joints	<p>Closed HDPE shrink joints, which are pre-installed, before the steel pipe is welded together.</p> <p>Available for foaming.</p> <p>Foam holes are sealed with weld plugs.</p> <p>HDPE shrink joints can be used in all normal soil types, where the groundwater table is constantly less than 0.5 m over the pipes.</p>

The Bonded Single Pipe Casing joints - BandJoint

Application

The BandJoint is an open PE weld joint with integrated copper wires in the weld zone.

Can be used for reduction when the difference in casing diameter is max. 25 mm. See the section "Reduktions".

LOGSTOR WeldMaster is used to weld the BandJoint.

Not applicable for flexible pipes.

BandJoint ø 90-200 mm

LOGSTOR WeldMaster is used to weld BandJoints.

Delivered with pre-drilled holes for foaming.

Delivered 2 pcs., packed in white PE foil.

To be stored vertically.

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5610

BandJoint ø 90-200 mm

BandJoint length L, mm	Casing dimension, mm	
	90-125	140-200

The Bonded Single Pipe Casing joints - BandJoint

BandJoint ø 225- 1400 mm

Delivered 1 pc., packed in white foil.

As a standard delivered rolled.

Dimensions ≥ 355 mm can be delivered flat on a pallet with frames on request.

If the BandJoints are delivered flat, they must be rolled the day before installation.

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5612

* Length 1020 mm is used for E-Comps and repairs.

Materials

Casing joint: HDPE

Accessories

To be foamed with foam pack, component No. 0700.

Machine foam is used for major dimensions.

When ordering state insulation series, and that foam pack must be included in the delivery.

The Bonded Single Pipe
Casing joints - BandJoint

Depth guard

The accessory set contains:

- 1. Depth guard
- 2. Screws
- 3. Felt pad
- 4. Venting plugs
- 5. Weld plugs
- 6. Insulator feet

The length of the depth guard L_1 is determined by the length of the cut.
 A = cut length
 L_2 = BandJoint length

Component
overview/data

Component No. 5606

The Bonded Single Pipe Casing joints - EWJoint

Application

Applicable for casing diameters $\varnothing 90 - 1400$ mm.

Pre-install the joint prior to welding the service pipe together.

The joint is welded together with the outer casing by means of a loose weld strip between the joint and the outer casing. LOGSTOR WeldMaster is used to weld the EWJoint.

Not applicable for flexible pipes.

Description

The EWJoint consists of:

1. Shrink sleeve
2. Weld strip
3. Venting plugs
4. Weld plugs
5. Staples to fix weld strips

The sleeves are delivered wrapped in white PE foil.

The accessories 2-4 are delivered separately in a plastic bucket.

Staples (5) are ordered separately

Store the sleeve vertically.

Max. temperature during transportation and storage: 40°C.

The Bonded Single Pipe Casing joints - SX-WPJoint

Application

Shrink sleeve made of cross-linked PE (PEX) for foaming. The sleeve is shrinkable at both ends for dimensions \varnothing 90-450 mm and shrinkable in the entire length for dimensions \varnothing 500-710 mm. The foam holes are sealed with weld plugs.

Pre-install the shrink sleeve on the pipe prior to welding the service pipe together.

The shrink sleeve can as a standard be reduced by one dimensional offset. See below table.

When installed on pipes with corrugated casing the sleeve ends are sealed with additional collars to be ordered separately.

Description \varnothing 90-450 mm

The SX-WPJoint consists of:

1. Shrink sleeve with integrated mastic
2. Venting plugs
3. Weld plugs

Delivered in white PE-foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60° C

Accessories

To be foamed with foam pack, component No. 0700.

When ordering state insulation series, and that foam pack must be included in the delivery.

Collar for corrugated casing, component No. 5500. Order 2 pcs. per joint.

The Bonded Single Pipe Casing joints - BXJoint

Application

Shrink sleeve made in cross-linked PE (PEX) with insulation shells of polyurethane (PUR).

BXJoint is double sealed. Applicable for casing dimensions \varnothing 90-630 mm.

Pre-install the shrink sleeve on the pipe prior to welding the service pipe together.

Can be used for reduction. The dimensional limits appear from the table. Due to the insulation shells the largest dimension is ordered.

Description

The BXJoint consists of:

1. PEX shrink sleeve with integrated hot-melt and mastic
2. Insulation shells
3. Shrink film

Delivered in white PE foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60°C.

Available with insulation shells for series 1, 2, and 3.

The Bonded Single Pipe

Casing joints - C2LJoint with insulation shells

Application

The shrink joint C2L is an open joint for outer casing dimensions \varnothing 90-630 mm.

C2LJoint is double sealed.

Open shrink sleeve in PE with insulation shells in PUR. The shrink sleeve is cut longitudinally prior to installation.

Used to repair pipes with steel service pipe.

Description

The C2LJoint consists of:

1. Insulation shells
2. Shrink film
3. Shrink sleeve with integrated hotmelt
4. Shrink wrap
5. Closure patches

Delivered in a white PE foil.

Store the sleeve vertically.

Max. temperature during transport and storage: 40°C.

Available with insulation series for series 1, 2, and 3.

The Bonded Single Pipe

Directional changes - SXB-WPJoint

Application

SXBJoint is used for directional changes of 0-90°. The sleeve is made of crosslinked PE (PEX)

This joint can be used under all common soil conditions and for all installation methods.

The SXBJoint can as a standard be reduced according to below table.

Description

A SXB-WPJoint consists of:

1. Shrink sleeve with a flexible bending zone. The sleeve ends contain hotmelt and mastic

2. Venting plugs

3. Weld plugs

The joint is wrapped in a white foil on delivery.

Store the sleeve vertically.

Max. temperature during transportation and storage: 60°C.

Component overview/data

Materials

Casing joint: Cross-linked PE (PEX)

Mastic: PIB-based mastic

Venting plugs: Polypropylene

Weld plugs: HDPE

Accessories

To ensure centering bends for SXB-WPJoint, component No 5252 are used.

Wooden wedges are used to fix the bend fitting during installation, component No. 1997. See the Tools section.

To be foamed with foam pack, component No. 0700. When ordering state insulation series, and that foam pack must be included in the delivery.

The Bonded Single Pipe
Directional changes - SXB-WPJoint

Steel bend

Steel bend with bending radius, especially adjusted to the SXB-WP bend fitting.

Due to the centering in the joint, steel bends with other radii must not be used.

The Bonded Single Pipe

Directional changes - Preinsulated bend

Bend 90°

Preinsulated bends comply with the requirements in EN 448 and can be used for a max. operating pressure of 25 bar up to and including DN400. Larger dimension are as a standard for max. operating pressure of 16 bar. However, on request they are available for an operating pressure of 25 bar.

90° bends in dimensions $\leq \varnothing 406.4$ mm have a bending radius of $2.5 \times d$ and are made by means of cold bending.

90° bends in dimensions $\geq \varnothing 457.0$ mm have a bending radius of $1.5 \times d$ and are made by means of a weld elbow.

Preinsulated bend with same leg lengths.

On request available in major dimensions.

The Bonded Single Pipe

Directional changes - Curved pipes

Application

Curved pipes are made by bending whole lengths of preinsulated pipes.

Max. operating pressure: 25 bar,

Further information about the application of curved pipes, see Design Manual.

Description

Delivered in lengths of 12 and 16 m.

Curved pipes are supplied with embedded copper wires for surveillance.

When ordering please state length, bending angle, and bending directions.

Direction:

When ordering please state the direction in which the pipes must be bent:

↑	up
↓	down
←	left
→	right

The direction is defined on the assumption that the tinned wire is to the right and the bare copper wire to the left.

Geometry:

v_p = Bending angle, degrees

R_p = Design radius, m

L_1 = Length of straight pipe ends, m

Tol = Tolerance of angle, degrees

The tolerance is calculated as a 1/3 of the elastic angle of the steel pipe.

Manufactured curved pipes are delivered in angles in whole 1° intervals.

However, for dimensions larger than DN500 with 1 decimal place.

In addition the max. bending angle, $v^{\circ}p$ must be determined in relation to the stress level under which it is being installed, see Design.

The Bonded Single Pipe Branches - General

Branch types

LOGSTOR supplies 4 different types of branches:

- Weld joint branch (is welded onto the main pipe and shrunk onto the branch)
- Shrink joint branch
- Preinsulated T-piece
- Branch for concrete trench

T-joints

LOGSTOR has 3 types of T-joints in its product assortment:

- BandJoint-branch Flextra
- TSJoint
- SXT-WPJoint

BandJoint-branch Flextra, where the main pipe is welded. The cross-linked branch is shrunk onto the mastic and sealed with a collar.

The TSJoint can be welded onto the main pipe or be shrunk on the mastic tape and sealed with a shrink sleeve. The branch is cross-linked and shrunk on the mastic tape and sealed with a collar.

The SXT-WPJoint is made of cross-linked material with embedded mastic. Is shrunk onto the main pipe and branch.

T-joints with mastic-sealed solutions can be used in all normal soil types, where the groundwater table is < 0.5 m above the pipes.

Pre-insulated branches

Preinsulated T-pieces are available in 3 different designs:

- T-piece with dimensional offset (45°)
- T-piece parallel (90°)
- T-piece straight

Preinsulated T-pieces are produced in accordance with EN 448.

The Bonded Single Pipe Branches - Reinforcement plate

Application

Used in connection with branches to reinforce the main pipe in T-pieces, if necessary according to LOGSTOR Design Manual.

Description

The reinforcement plate is either 2-part or one plate.

The combinations, marked in below table are available.

Component

Component No. 5426

The Bonded Single Pipe Branches - SXT-WPJoint

Application

T-joint for foaming. Made of cross-linked PE (PEX) with flanges and bolts in acid-resistant steel AISI 316 L. The T-joint is shrinkable and the foam holes are sealed with weld plugs.

The SXT-WPJoint can be used to branch perpendicular to or parallel with the main pipe.

The SXT-WPJoint can be used together with a hot tapping valve. The insulation thickness around the valve casing will be thinner.

Installation on FlextraPipe with corrugated casing requires that the branch be secured with an extra collar, which is ordered separately.

Description

The SXT-WPJoint consists of:

1. Main pipe joint
2. Branch pipe joint
3. Venting plugs
4. Weld plugs
5. Connecting piece with spacers (to be ordered separately)

Max. temperature during transport and storage: 60°C.

The Bonded Single Pipe Branches - TSJoint

Application

T-joint for foaming, used to branch perpendicular to or parallel with the main pipe. The main pipe is made of weldable PE and the branch of cross-linked PE (PEX). The T-joint is shrinkable.

The main pipe is extrusion welded longitudinally, and then the ends are either shrunk onto the mastic tape and sealed with open shrink sleeves or welded with weld strips like the EWJoint.

The branch is shrunk onto the embedded mastic and sealed with a collar.

Foam holes are sealed with weld plugs in the main pipe and with expansion plugs in the branch.

The TSJoint can be used together with a hot tapping valve. The insulation thickness around the valve casing will be thinner.

TSJoint main pipe $\varnothing 450$ mm can be used as a saddle solution for outer casing $\varnothing 355$ - $\varnothing 560$ mm.

Description

The TSJoint with mastic consists of:

1. T-joint
2. Mastic tape
3. Venting plugs
4. Weld plugs
5. Venting and expansion plugs
6. Collar
7. 45° or 90° connecting piece (to be ordered separately)
8. Open shrink wraps

The TSJoint EW consists of:

1. T-joint
2. Weld strips
3. Venting plugs
4. Weld plugs
5. Venting and expansion plugs
6. Collar
7. 45° or 90° connecting piece (to be ordered separately)

The accessories 2-4 are delivered separately in a plastic bucket.

Max. temperature during transport and storage: 40°C.

The Bonded Single Pipe Branches - BandJoint-branch Flextra

Application

A BandJoint-branch Flextra is welded onto the main pipe. The branch is sealed with mastic and a collar.

The main pipe joint is made of weldable PE with embedded welding wires. The branch is made of cross-linked material with embedded mastic for sealing. Can be used perpendicular to or parallel with the main pipe.

BandJoint-branch Flextra can be used together with a hot tapping valve. The insulation thickness around the valve casing will be thinner.

- Description**
- A BandJoint-branch Flextra set consists of:
- 1. BandJoint-branch
 - 2. Venting and expansion plug for the branch
 - 3. Collar for the branch
 - 4. Accessories set
 - 5. 45° or 90° connecting piece (to be ordered separately)

When ordering state insulation series, and that delivery must include foam packs.

Reinforcement plate to reinforce the main pipe, if necessary, component No. 5426.

The Bonded Single Pipe Branches - BandJoint-branch Flextra

Depth guard

- The set contains:
- 1. Depth guard
 - 2. Screws
 - 3. Felt pad
 - 4. Venting plugs
 - 5. Weld plugs
 - 6. Insulator feet

**Component
overview/data**

Component No. 5606

Depth guard

	Dimension	
	90-200	225-315
Depth guard		
Covering length, mm	440	440
W, mm	40	70
L, mm	500	500

Materials

- Depth guard: Hot galvanised plate
- Felt pad: Felt
- Screws: Steel
- Venting plug, branch: LDPE
- Weld plugs: HDPE

The Bonded Single Pipe
Branches - BandJoint-branch Flextra

Connecting piece To ensure correct positioning of the branch pipe joint the connecting piece is delivered with spacers, fitting the relevant branch pipe. Outer casing dimension D2 is therefore to be stated when ordering.

The Bonded Single Pipe Branches - Hot tapping valve

Application

Hot tapping valves are used to establish branches on pipelines in operation.

Max. pressure closed valve 16 bar. Operating pressure after establishment of branch: 25 bar.

Please note that reinforcement of the main pipe may be necessary, cf. LOGSTOR Design Manual.

For further details, please see the product data sheet of the valve supplier.

Danfoss JIP

All hot tapping valves have a hexagon spindle and a hexagon plug.

Component

The Bonded Single Pipe Branches - Preinsulated T-piece 45°

Application

Main pipes and branches up to dimension 323.9 mm are delivered in reinforced designs in order to withstand axial forces corresponding to stresses of 330 MPa, if the branch dimension is smaller than the main pipe dimension.

In case main pipe and branch have the same dimension, T-pieces can withstand axial forces corresponding to stresses of 190 MPa.

Preinsulated T-pieces are produced in accordance with EN 448.

T-pieces $> \varnothing 323.9$ must always be documented by the design responsible person specifically as regards project class C after EN13941-1.

Internal pressure = 25 bar (grey = 16 bar)

All preinsulated T-pieces are delivered with 2 embedded wires. A copper wire and a tinned wire.

The tinned wire always runs into the branch, whereas the copper wire runs straight through.

Wall thickness

$\varnothing 33,7-323,9$:

T-pieces are made by collaring on base pipes in large wall thickness, cf. table, with the following exceptions:

T-pieces with main pipe and branch in the same dimension are made with weld-T-piece in accordance with EN 10253-2.

T-pieces for main pipe dimension $\varnothing 139.7-323.9$ and branch in one dimension smaller than the main pipe dimension will be carried out with direct branch on pipes with larger wall thickness.

$\varnothing 355,6-508,0$:

For dimension $\geq \varnothing 355,6$ the direct branch will be carried out with reinforcement plate, if necessary.

T-pieces with the same main pipe dimension and branch dimension are made with weld-T-piece according to EN10253-2.

Materials

All materials are like for straight pipes: Steel/PUR/PE-HD.

The Bonded Single Pipe Branches - Preinsulated T-piece 90°

Application

Main pipes and branches up to dimension 323.9 mm are delivered in reinforced designs in order to withstand axial forces corresponding to stresses of 330 MPa, if the branch dimension is smaller than the main pipe dimension.

In case main pipe and branch have the same dimension, T-pieces can withstand axial forces corresponding to stresses of 190 MPa.

Preinsulated T-pieces are produced in accordance with EN 448.

T-pieces > $\varnothing 323.9$ must always be documented by the design responsible person specifically as regards project class C after EN13941-1.

Internal pressure = 25 bar (grey = 16 bar)

All preinsulated T-pieces are delivered with 2 embedded wires. A copper wire and a tinned wire.

The tinned wire always runs into the branch, whereas the copper wire runs straight through.

Wall thickness

$\varnothing 33,7-323,9$:

T-pieces are made by collaring on base pipes in large wall thickness, cf. table, with the following exceptions:

T-pieces with main pipe and branch in the same dimension are made with weld-T-piece in accordance with EN 10253-2.

T-pieces for main pipe dimension $\varnothing 139.7-323.9$ and branch in one dimension smaller than the main pipe dimension will be carried out with direct branch on pipes with larger wall thickness.

$\varnothing 355,6-508,0$:

For dimension $\geq \varnothing 355,6$ the direct branch will be carried out with reinforcement plate, if necessary.

T-pieces with the same main pipe dimension and branch dimension are made with weld-T-piece according to EN10253-2.

Materials

All materials are like for straight pipes: Steel/PUR/PE-HD.

The Bonded Single Pipe Branches - Adaptor pipe

Application

Used when branching from pipe in concrete duct. Ensures a water-proof introduction into the concrete duct and allows the branch to follow the movement of the main pipe in the concrete duct.

Description

The set consists of:

- Connecting pipe
- Shrink sleeve
- Wall entry sleeve

The Bonded Single Pipe

Valve arrangements - Overview

Description	This section contains a description of the valve arrangements, used in connection with isolation, venting and draining the pipe systems.
Contents	<div>General</div> <div>Isolation valve</div> <div>Isolation valve with 1 service valve</div> <div>Isolation valve with 2 service valves</div> <div>Permanent spindle extension</div> <div>Cover</div> <div>Preinsulated pipe with service valve</div> <div>Preinsulated service valve</div> <div>Disposable valve</div>

The Bonded Single Pipe Valve arrangements - General

Valve arrangements	<p>The preinsulated isolation valves can be installed at any point in the pipe system and are installed directly in the ground during pipe installation.</p> <p>Preinsulated isolation valves are applicable to all installation methods.</p> <p>The isolation valve is a ball valve, consisting of an all-welded casing and a polished stainless steel ball, fitted with spring loaded teflon seats which make the valve watertight even at low pressures.</p> <p>All LOGSTOR standard valves are with reduced passage.</p> <p>Enquiry may be made for valves with full passage.</p>
Isolation valve	<p>Isolation valve for \varnothing 33.7 - 323.9 mm. Larger dimensions are made to order.</p> <p>Component No. 4200.</p>
Isolation valve with 1 service valve	<p>Isolation valve for \varnothing 48.3 - 323.9 mm.</p> <p>Larger dimensions are made to order.</p> <p>Component No. 4220.</p>
Isolation valve with 2 service valves	<p>Isolation valve for \varnothing 48.3 - 323.9 mm.</p> <p>Larger dimensions are made to order.</p> <p>Component No. 4240.</p>
Extension spindle	<p>Permanent extension spindle for \varnothing 33.7 - 323.9 mm.</p> <p>Component No. 4285.</p>
Covers	<p>Two types of covers are available:</p> <p>A. Galvanized metal cover for protection against high groundwater level</p> <p>Component No. 4315.</p> <p>B. PE-cover</p> <p>Component No. 5716.</p>
Separate venting and draining	<p>There are two different, separate venting and draining possibilities available:</p> <p>A: Preinsulated connecting piece with service valve for on-site installation.</p> <p>Component No. 4270.</p> <p>B: Preinsulated service valve</p> <p>Component No. 3400.</p>
Disposable valve	<p>A disposable valve is used for temporary shut-off of house connections. It is placed in an end fitting.</p> <p>Component No. 4264.</p>

The Bonded Single Pipe Isolation valve

Application

Preinsulated isolation valves can be installed at any point in the pipe system. They can be used for all installation methods. Max. axial stress 300 N/mm². Working pressure: 25 bar.

Description

All preinsulated isolation valves have embedded copper wires for surveillance.

As a standard preinsulated isolation valves are delivered with the surveillance wires, extracted into a loop as an isolated wire under the end cap at the spindle top. Where the isolated wire exits under the end-cap it is coated with 25 mm mastic on the outer as well as the inner side.

They are available in dimensions \varnothing 33.7 - 323.9 mm. Larger dimensions are made to order.

LOGSTOR standard preinsulated isolation valve is either a Vexve valve or a Broen valve. The geometry, spanner width of the spindle and of the back-stop are the same regardless of which valve is delivered.

As a standard valves with reduced passage are delivered. On enquiry valves with full passage may be delivered.

For steel dimensions \geq 219.1 mm the valve must be operated by means of a gear. To be ordered separately. See Tools section.

Valves \varnothing 33.7 - 168.3 mm can be operated by means of a tee key.

Valves \varnothing 114.3 - \varnothing 406 mm can be operated by means of a portable gear.

Valves $\geq \varnothing$ 168.3 mm can be delivered with a fix gear on enquiry. Hydraulic or electric actuator is available on enquiry.

323.9	450	2500	610	560	200	350	60.3/140	50	90

Materials

Preinsulated isolation valves comply with the requirements in EN 488.

The isolation valve is a ball valve, consisting of an all-welded casing and a polished stainless steel ball, fitted with spring loaded teflon seats.

Spindle top and service valves are made of stainless steel.

Other materials as for straight pipes.

The Bonded Single Pipe Isolation valve with 2 service valves

Application

Preinsulated isolation valve with service valves for venting and draining can be installed at any point in the pipe system.

They can be used for all installation methods. Max. axial stress 300 N/mm².

Working pressure: 25 bar.

Description

All preinsulated isolation valves have embedded copper wires for surveillance.

As a standard preinsulated isolation valves are delivered with the surveillance wires, extracted into a loop as an isolated wire under the end cap at the spindle top. Where the isolated wire exits under the end-cap it is coated with 25 mm mastic on the outer as well as the inner side.

They are available in dimensions \varnothing 48.3 - 323.9 mm. Larger dimensions are made to order.

LOGSTOR standard preinsulated isolation valve is either a Vexve valve or a Broen valve. The geometry, spanner width of the spindle and of the back-stop are the same regardless of which valve is delivered.

As a standard valves with reduced passage are delivered. On enquiry valves with full passage may be delivered.

For steel dimensions \geq 219.1 mm the valve must be operated by means of a gear. To be ordered separately. See Tools section.

Valves \varnothing 33.7 - 168.3 mm can be operated by means of a tee key.

Valves \varnothing 114.3 - \varnothing 406 mm can be operated by means of a portable gear.

Valves $\geq \varnothing$ 168.3 mm can be delivered with a fix gear on enquiry. Hydraulic or electric actuator is available on enquiry.

4285 0500 013 001	219.1 - 323.9	50/90	500

On enquiry spindle extension is available at intervals of 250 mm from length 500 mm to 2000 mm.

The Bonded Single Pipe Cover

Application The galvanized cover is used in water-logged areas.

At periodic floodings the cover effectively prevents water from penetrating into the spindle top and the venting/drainage valves and exposing these to corrosion or deposits.

Description The cover is not fixed, but simply placed over the spindle top or the venting/drainage arrangement.

The weight of the cover prevents it from being lifted by floods.

Component overview/data Component No. 4315

Cover

Product No.	Spindle top ø mm	Vent./drain. arrangement ø mm	ød mm	H mm
4315 0033 021 004	110		132	330

5716 0200 005 001	180	200

The Bonded Single Pipe Preinsulated pipe with service valve

Application

A separate venting or draining arrangement can be installed at any point in a pipe system by application of a standard venting/draining component together with a vertical branch joint.

This simplifies the design, saves special components and means less joints.

If the construction is placed in an open inspection chamber, it must be well-drained.

Preinsulated connecting piece with service valve

The component consists of a standard preinsulated pipe with a service valve in stainless steel welded onto it.

Sealing has been carried out with PE-end cap.

Alternative

A valve arrangement may also be made of a piece of preinsulated pipe, a loose service valve, and an end cap.

Note! All parts outside the insulation/end cap must be protected against corrosion.

The Bonded Single Pipe Preinsulated service valve

Application Preinsulated service valves are used for venting or drainage in wanted spots in the pipe system.

Applicable for all installation methods.

All shown dimension combinations are in reinforced design, allowing axial stress corresponding to 300 MPa.

Description The preinsulated service valves have embedded copper wires for surveillance.

Surveillance wires go straight through the preinsulated service valve.

Component overview/data Component No. 3400

Preinsulated service valve

508.0	710	800	900	2000	752	60.3/140

Materials Service valves comply with the requirements in EN 448.

Service valve units are made of stainless steel.

Materials of other components like straight pipes.

The Bonded Single Pipe Disposable valve

Application

Disposable valves are e.g. used in connection with branches and terminations where pipelines will not be extended until later.

The valve is temporarily covered with a foamed end fitting.

When the pipeline is extended and the valve is opened the spindle is fully welded.

Please have the internal space requirements in mind, when choosing the dimension of the temporary end fitting and the later permanent casing joint. This depends on whether the valve has a reduced or a full passage.

For further details, see the product data sheet of the valve supplier.

Description

Rustproof ball valve with weld-on ends.

Technical

In connection with TwinPipes it may be necessary to displace the valves in relation to each other.

The Bonded Single Pipe Reductions - Overview

Description	This section shows, how to make reductions between outer casings and service pipes.
Contents	Weld reductions Weld joints Shrink joints Preinsulated reduction

The Bonded Single Pipe Reductions - Weld reduction

Application

All service pipe reductions must be carried out by means of a steel reduction.

1 dimensional offset: max. axial stress 300 N/mm²

2 dimensional offset: max. axial stress 150 N/mm²

In connection with a reduction of the steel service pipe, the design instructions must be complied with.

Description

Transition between two steel pipe dimensions is made with weld reductions.

Steel quality according to EN 10253-2

The Bonded Single Pipe Reductions - Preinsulated reduction

Application

The preinsulated reduction is used for reduction with one or two dimensional offsets.

Max. operating pressure: 25 bar

1 dimensional offset: max. axial stress 300 N/mm²

2 dimensional offsets: max. axial stress 150 N/mm²

In connection with a reductions the design instructions must be complied with.

Description

Preinsulated reductions are available with one or two reducing offsets.

All preinsulated reductions are supplied with embedded copper wires for surveillance.

Materials

Weld reduction: Steel quality according to EN 10253-2.

Steel pipe/PUR-foam/PE-HD outer casing like for steel-in-plastic pipes.

Preinsulated reductions comply with the requirements in EN 448.

The Bonded Single Pipe Reductions - Preinsulated reduction

Application

The preinsulated reduction is used for reduction with one or two dimensional offsets.

Max. operating pressure: 25 bar

1 dimensional offset: max. axial stress 300 N/mm²

2 dimensional offsets: max. axial stress 150 N/mm²

In connection with a reductions the design instructions must be complied with.

Description

Preinsulated reductions are available with one or two reducing offsets.

All preinsulated reductions are supplied with embedded copper wires for surveillance.

The Bonded Single Pipe Terminations - Overview

Description	This section contains a description of the components which are delivered by LOGSTOR for terminations e.g. in connection with foundations, cellars, house entries and concrete ducts.
Contents	House entry pipe Wall entry sleeve End cap End fitting Valve with handle

The Bonded Single Pipe Terminations - House entry pipe

Application Prefabricated house entry pipes facilitate the installation of district heating pipes in buildings without cellars.

Description The bend is cold bent with bending radius $R = 2,5 \times d$.
The tinned copper wires for surveillance are placed inside the bends.

Component overview/data Component No. 2501

House entry pipe

Steel pipe ø out. mm	House entry pipe 1.5 x 2.5 m		
	Outer casing, ø mm		
	Series 1	Series 2	Series 3
26.9	90	110	125

139.7	225	250	280
168.3	250	280	315
219.1	315	355	400

Larger dimensions are available as special house entry bends.
A house entry bend 1.5 x 4.5 m is available to order.
Alternatively, a vertical bend 1.5 x 1.5 m can be used.

Materials All materials are the same as those for straight pipes: steel/PUR/PE-HD.

The Bonded Single Pipe Terminations - Wall entry sleeve

Application

Where pipes are installed through masonry - at wells, footings etc. - wall entry sleeves are installed as a seal against water ingress.

Exposed to groundwater pressure the wall entry sleeves may not be watertight. In such cases please contact LOGSTOR.

If sealing rings which can withstand large axial movements are required, please contact LOGSTOR.

Description

Note! De - 2x18 mm is smaller than the nominal diameter, so the sleeve fits tightly around the outer casing.

The Bonded Single Pipe

Terminations - Radon-tight wall entry sleeve

Application Where pipes are installed through masonry - at wells, footings etc. - wall entry sleeves are installed as a seal against water ingress.

Description This wall entry sleeve is radon-tight.
The wall entry sleeve can withstand a water pressure of 4 m, if there is no movement.
If there are minor movements ± 5 mm, the wall entry sleeve can withstand a water pressure of 1 m.

Dimensions:

110 – 180 mm:

- A = 40 mm and B = 22 mm

200 - 900 mm:

- A = 50 mm and B = 27 mm

Component overview/data Component No. 5800

Materials Rubber: EPDM
Strap: Steel (Aluzink)

The Bonded Single Pipe Terminations - Standard end cap

Application

The end cap is used to seal the pipes in order to prevent moisture from penetrating into the insulation.

End caps are used in connection with house entries, terminations in chambers, connections to concrete ducts, in cellars etc. Can be used at continuous operating temperature up to 120°C and a peak temperature (short-term) of up to 130°C.

The Bonded Single Pipe

Terminations - End fitting with insulation shells

Application

To temporarily terminate a pipe system a PE end fitting is used. Which end fitting to use depends on the dimension.

Description

An end fitting set consists of:

1. Insulation shells
2. End fitting:
 - a. \varnothing 90-160 mm, expanded
 - b. \varnothing 180-630 mm, drifted
3. Open shrink wrap with closure patch

Irrespective of the service pipe dimension the end fitting is ordered according to the outer casing dimension. This means, that sometimes there will be a little gap between the service pipe and the insulation shell. This is of no practical importance.

In connection with disposable valves end fittings for foaming are used.

Component overview/data

Component No. 5700

The Bonded Single Pipe

Terminations - End fitting with insulation shells

Materials	Insulation shells: Polyurethane (PUR) End fitting: ø 90-160 mm: Crosslinked and finger-expanded PE ø 180-630 mm: Drifted PEHD Open shrink wrap with closure patch: PEX with PIB mastic and hotmelt
Accessories	In connection with termination with end fitting use weld-on end, component number 1008.

The Bonded Single Pipe Terminations - End fitting for foaming

Application

To terminate a pipe system with a \varnothing 90-630 mm outer casing PE end fittings for foaming are used.

Description

The end fitting for foaming consists of:

1. Closed shrink sleeve
2. Open shrink wrap
3. Closure patch
4. Weld plugs
5. Venting plugs

Irrespective of the service pipe dimension the end fitting is ordered according to the outer casing dimension.

At disposable valves long end fittings are used.

Please pay attention to the required space in connection with disposable valves with full passage.

The Bonded Single Pipe Terminations - Valve with handle

Application

Valves with handle are used in buildings. The valves are delivered with weld ends at both ends or internal thread and weld end.

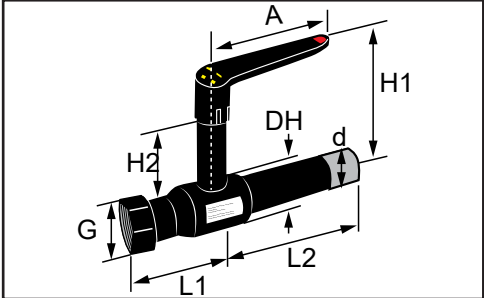

The operating handle is designed, so there is sufficient space for the insulation around the valve itself.

All valves with handle for installation in buildings have full passage.

The handle can be turned 180°.

Description

Isolation valves with reduced and full passage.

Component overview/data

Component No. 4261

The Bonded TwinPipe

General

Application

LOGSTOR TwinPipes are used for distribution pipelines within district heating systems.

The TwinPipe system is dimensioned for a temperature difference between flow and return pipeline of 60 K.

Max. operating pressure = 25 bar

Continuous operating temperature = 120°C

Max. temperature (short-term) = 140°C

Fixing bars are dimensioned for a temperature difference between the flow and return pipeline of 60 K.

The TwinPipe system fulfills the requirements of EN 253 as well as EN 13941 for continuous operation with hot water at various temperatures up to 120 °C, and at individual time intervals with a peak temperature up to 140 °C. The sum of these individual time intervals shall, in average, not exceed 300 hours a year.

For temperature references which deviate from above standards we can - on request - calculate the estimated service life on the basis of the actual expected temperature set during a year.

Please contact LOGSTOR, if your conditions differ from the limit values in EN 253.

Description

TwinPipes are delivered in lengths of 6 m, 12 m, or 16 m dependent on the dimension.

TwinPipes in casing dimension 125 mm to 315 mm can be delivered produced with diffusion barrier for insulating gases.

TwinPipes traditionally produced are delivered in casing dimension 125 mm to 710 mm.

For a description of the two production methods please refer to section 2.0

Delivered with a 220 mm ±10 mm free end.

Pipes and fittings are delivered with 2 copper wires, embedded in the insulation.

TwinPipe pipes and fittings are according to EN15698-1 and EN 15698-2.

The Bonded TwinPipe

The Bonded TwinPipe Pipes

Description

TwinPipes in outer casing 125 mm to 315 mm are available with diffusion barrier in 12 m or 16 m lengths.

Larger dimensions are available on enquiry.

The Bonded TwinPipe

Zebra pipe

Description

The zebra pipe is divided into sections of 0.5-1.5 m, marked with transverse tapes.

Every second section has no adhesion between the insulation and the service pipe. These sections are marked with longitudinal tape.

Component overview/data

The Bonded TwinPipe

Casing joints - General

Joints	<p>LOGSTOR supplies three different casing joint types:</p> <p>Weld joints</p> <p>Cross-linked shrink joints</p> <p>HDPE shrink joints</p> <p>All casing joint types have been tested and approved according to EN 489.</p>
Weld joints	<p>LOGSTOR has two weld joint types:</p> <p>The BandJoint, which is an open weld joint, installed after the steel pipe has been welded together. The BandJoint has integrated copper wires in the welding zone.</p> <p>The EWJoint, which is a closed HDPE shrink joint, which are pre-installed, before the steel pipe is welded together. Weld strips are delivered separately and installed just before the joint is to be shrunk.</p> <p>Weld joints can be used in all soil types - also when the groundwater table is more than 0.5 m over the pipes e.g. crossing streams and in oil-polluted soil as well as strongly acid soil, bacterially active dumps and lake or sea deposits</p>
Cross-linked joints	<p>Closed shrink joints, which are pre-installed, before the steel pipe is welded together.</p> <p>Available for foaming or with insulation shells.</p> <p>Foam holes are sealed with weld plugs.</p> <p>Cross-linked joints can be used in all normal soil types, where the groundwater table is constantly less than 0.5 m over the pipes.</p>
HDPE shrink joints	<p>Closed HDPE shrink joints, which are pre-installed, before the steel pipe is welded together.</p> <p>Available for foaming.</p> <p>Foam holes are sealed with weld plugs.</p> <p>HDPE shrink joints can be used in all normal soil types, where the groundwater table is constantly less than 0.5 m over the pipes.</p>

The Bonded TwinPipe

Casing joints - BandJoint

Application

The BandJoint is an open PE weld joint with integrated copper wires in the weld zone.

Can be used for reduction when the difference in casing diameter is max. 25 mm. See the section "Reduktions".

LOGSTOR WeldMaster is used to weld the BandJoint.

Not applicable for flexible pipes.

BandJoint ø 90-200 mm

LOGSTOR WeldMaster is used to weld BandJoints.

Delivered with pre-drilled holes for foaming.

Delivered 2 pcs., packed in white PE foil.

To be stored vertically.

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5610

BandJoint ø 90-200 mm

BandJoint length L, mm	Casing dimension, mm	
	90-125	140-200
570 (STD)	x	x
830 (XL)*	x	x

*is used for E-Comp and repairs.

The Bonded TwinPipe Casing joints - BandJoint

BandJoint dimensions ø 225-710 mm.

Delivered 1 pc., packed in white foil.

As a standard delivered rolled for dimensions ≥ 355 mm. Can be delivered flat on a pallet with frames on request.

If the BandJoints are delivered flat, they must be rolled the day before installation.

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5612

BandJoint ø 225-710 mm											
L mm	Casing dimension, mm										
	225	250	280	315	355	400	450	500	560	630	710

1020*	x	x	x	x	x	x	x	x	x	x	x

* Length 1020 mm is used for repairs.

Materials Casing joint: HDPE

Accessories To be foamed with foam pack, component No. 0700.

When ordering state insulation series, and that foam pack must be included in the delivery.

The Bonded TwinPipe Casing joints - BandJoint

Depth guard

The accessory set contains:

1. Depth guard
2. Screws
3. Felt pad
4. Venting plugs
5. Weld plugs
6. Insulator feet

The length of the depth guard, L_1 , is determined by the length of the cut.

A = cut length

L_2 = BandJoint length

Component overview/data

Component No. 5606

Depth guard

Width, mm	Casing dimension, mm	A, mm	L_2 mm	L_1 mm	No. of screws and insulator feet per depth guard
Depth guard STD (40)	90-200	420-455	570	500	2
Depth guard XL* (40)	90-200	680-715	830	760	4

Depth guard XXL** (70)	225-710	810-845	1020	890	4

* Depth guard XL is used for repairs. ** Depth guard XXL is used for repairs.

Materials

Depth guard: Hot galvanised plate

Felt pad: Felt

Venting plugs: Propylene

Weld plugs: HDPE

The Bonded TwinPipe
Casing joints - BandJoint

Long insulator feet In connection with insulation thicknesses > 85 mm 70 mm long insulator feet must be used for the adjusting screws.

Component overview/data Component No. 5606

Long insulator feet

Depth guard	Casing, mm		
	Series 1	Series 2	Series 3
STD and XXL	630-710	450-710	400-710

25 pcs. insulator feet in a bag: Product No. 5606 0000 010 000.

Materials Insulator foot: Etronite, high-pressure laminate

Long screws For major dimensions extra long screws are used in addition to the 70 mm insulator feet.

Component overview/data Component No. 1995

Materials Screws: Steel

The Bonded TwinPipe Casing joints - EWJoint

Application

Applicable for casing diameters $\varnothing 90 - 710$ mm.

Pre-install the joint prior to welding the service pipe together.

The joint is welded together with the outer casing by means of a loose weld strip between the joint and the outer casing. LOGSTOR WeldMaster is used to weld the EWJoint.

Not applicable for flexible pipes.

Description

The EWJoint consists of:

1. Shrink sleeve
2. Weld strip
3. Venting plugs
4. Weld plugs
5. Staples to fix weld strips

The sleeve is delivered wrapped in white PE foil.

The accessories 2-4 for one EWJoint are delivered separately in a plastic bucket.

Staples (5) are ordered separately

Store the sleeve vertically.

Max. temperature during transportation and storage: 40°C.

Component overview/data

The Bonded TwinPipe Casing joints - SX-WPJoint

Application

Shrink sleeve made of cross-linked PE (PEX) for foaming. The sleeve is shrinkable at both ends for dimensions \varnothing 90-450 mm and shrinkable in the entire length for dimensions \varnothing 500-710 mm. The foam holes are sealed with weld plugs.

Pre-install the shrink sleeve on the pipe prior to welding the service pipe together.

The shrink sleeve can as a standard be reduced by one dimensional offset. See below table.

When installed on pipes with corrugated casing the sleeve ends are sealed with additional collars to be ordered separately.

Description \varnothing 90-450 mm

The SX-WPJoint consists of:

1. Shrink sleeve with integrated mastic
2. Venting plugs
3. Weld plugs

Delivered in white PE-foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60° C

Component overview/data

Weld plugs: HDPE

Accessories

To be foamed with foam pack, component No. 0700.

When ordering state insulation series, and that foam pack must be included in the delivery.

Collar for corrugated casing, component No. 5500. Order 2 pcs. per joint.

The Bonded TwinPipe Casing joints - BXJoint

Application

Shrink joint made of cross-linked PE (PEX) with insulation shells of polyurethane (PUR).

For TwinPipe series 2

This shrink joint can be used for reduction. The dimensional limits appear from the table. Due to the insulation shells the largest dimension is ordered.

If BXJoint is used as a reduction, fixing bars must be installed on the biggest service pipe.

Description

The BXJoint consists of:

1. PEX shrink sleeve with integrated hot-melt and mastic
2. Insulation shells
3. Shrink film

Delivered in white PE foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60°C.

The Bonded TwinPipe Casing joints - BXSJoint

Application

Shrink sleeve made of cross-linked PE (PEX) used for outer casing dimensions \varnothing 90-630 mm.

BXSJoint is double sealed.

The shrink sleeve can be used for reduction. The dimensional limits appear from the table. Pre-install the shrink sleeve prior to welding the service pipe together.

The Alu-wrap can be used several times or remain in the joint as a diffusion barrier.

Description

BXSJoint consists of:

1. Wrap for foaming
2. Venting plug
3. Shrink sleeve with integrated hotmelt and mastic
4. Shrink film

Shrink sleeve and shrink film are delivered in white PE foil.

Store the sleeve vertically.

Max. temperature during transport and storage: 60°C.

Bend fitting SXB-WPJoint

Preinsulated bends

Curved pipes

The Bonded TwinPipe

Directional changes - SXB-WPJoint

Application

SXBJoint is used for directional changes of 0-90°. The sleeve is made of crosslinked PE (PEX)

This joint can be used under all common soil conditions and for all installation methods.

The SXBJoint can as a standard be reduced according to below table.

Description

A SXB-WPJoint consists of:

- 1. Shrink sleeve with a flexible bending zone. The sleeve ends contain hotmelt and mastic
- 2. Venting plugs
- 3. Weld plugs

The joint is wrapped in a white foil on delivery.

Store the sleeve vertically.

Max. temperature during transportation and storage: 60°C.

Component overview/data

Component No. 5033

SXB-WPJoint

Outer casing D mm	Shrinkable to ø mm		L mm
90	90	77	815
110	110	90	865
125	125	110	865

225-250	250	225	980
280-315	315	280	1225

Materials

Casing joint: Cross-linked PE (PEX)

Mastic: PIB-based mastic

Venting plugs: Polypropylene

Weld plugs: HDPE

Accessories

To ensure centering bends for SXB-WPJoint, component No 5252 are used.

Wooden wedges are used to fix the bend fitting during installation, component No. 1997. See the Tools section.

To be foamed with foam pack, component No. 0700. When ordering state insulation series, and that foam pack must be included in the delivery.

The Bonded TwinPipe

Directional changes - SXB-WPJoint

Steel bend

Steel bend with bending radius, especially adjusted to the SXB-WP bend fitting.

Due to the centering in the joint, steel bends with other radii must not be used.

Component overview/data

The Bonded TwinPipe

Directional changes - Vertical bend 90°

Application

Preinsulated, vertical bends comply with the requirements in EN15698-2 and can be used for a max. operating pressure of 25 bar.

Description

Dependent on dimension and angle either cold-bent bends or weld bends are used.

The bends have fixing bars welded onto both ends.

Materials

All materials are the same as for straight pipes: steel/PUR/PE-HD.

The Bonded TwinPipe

Directional changes - Curved TwinPipe

Description

Are delivered in lengths of 12 and 16 m.

Curved pipes are delivered with embedded copper wires for surveillance.

When ordering please state length, bending angle, and bending direction.

Direction:

When ordering it is stated in which direction the pipes must be bent:

← left
→ right

The direction is defined on the basis of the tinned wire being to the right, and the blank copper wire to the left.

Geometry:

v_p = bending angle, degrees

R_p = design radius, m

L_1 = length of straight pipe ends, m

Tol = tolerance of angle, degrees

The tolerance is calculated as 1/3 of the elastic angle of the steel pipe.

Manufactured curved pipes are delivered in angles in whole 1° intervals.

In addition max. bending angle, $v^\circ p$ must be determined in relation to the stress level, under which it is being installed, see Design for TwinPipes.

219.1	x	x	x	x	x	x	x

The Bonded TwinPipe Branches - TXJoint

Application

T-joint for foaming, used to branch perpendicular to the main pipe.

The T-joint is made of PE and the shrink sleeve of cross-linked PE (PEX).

If it is to be used in connection with hot tapping, this must be stated when ordering.

Installation on pipes with corrugated casing requires that the branch be sealed with an extra collar, which is ordered separately.

As a standard TXJoint is double sealed on the T-shoe. The branch can be double sealed by installing an open shrink wrap on one end of the SX-WPJoint towards the main pipe and a collar at the other end.

Description

The TXJoint consists of:

1. T-shoe including PERP tape
2. Open shrink wraps
3. Closure patches
4. Shrink wrap
5. Closure patch
6. SX-WPJoint
7. Venting plugs
8. Weld plugs

The branch piece of the T-shoe is one dimension larger than the dimension of the pipe which is connected to.

SX-WPJoint now reduces to the dimension of the pipe which is connected to.

Length of main pipe joint = 600 mm
 Length of shrink wrap = 900 mm
 Length of shrink sleeve = 650 mm

Materials

T-shoe: HDPE

SX-WPJoint: Cross-linked PE, PEX

Mastic: PIB-based mastic

Venting plugs: Polypropylene

Weld plugs: HDPE

Shrink wrap: PEX with PIB-based mastic and hotmelt

Accessories

Shrink wrap incl. closure patch to double-seal the branch, component No. 5400.
 Order 1 pc. per casing joint.

When connecting to FlextraPipe, order 1 pc. collar per casing joint for the branch
 with corrugated casing, component No. 5500.

Hot tapping valve, component No. 4280

To be foamed with foam packs, component No. 0700.

When ordering state insulation series, and that delivery must include foam packs.

Reinforcement plate to reinforce the main pipe, if necessary, component No.
 5426.

The Bonded TwinPipe Branches - TXJoint

Hot tapping

TXJoint can also be used for hot tapping in connection with the branch. When ordering state, that the T-joint will be used for hot tapping.

The connecting pipe is welded in continuation of the hot tapping.

From below table the dimensions which can be used with TXJoint and hot tapping valve appear.

The Bonded TwinPipe Branches - SXT-WPJoint

Application

T-joint for foaming. Made of cross-linked PE (PEX) with flanges and bolts in acid-resistant steel AISI 316 L. The T-joint is shrinkable and the foam holes are sealed with weld plugs.

The SXT-WPJoint can be used to branch perpendicular to or parallel with the main pipe.

The SXT-WPJoint can be used together with a hot tapping valve in dimensions according to the table. The insulation thickness around the valve chamber will be smaller.

Installation on FlextraPipe with corrugated casing requires that the branch be sealed with an extra collar, which is ordered separately.

Description

The SXT-WPJoint consists of:

1. Main pipe joint
2. Branch pipe joint
3. Venting plugs
4. Weld plugs

The Bonded TwinPipe Branches - TSJoint

Application

T-joint for foaming, used to branch perpendicular to the main pipe.

The main pipe is made of weldable PE and the branch of cross-linked PE (PEX). The T-joint is shrinkable.

The main pipe is extrusion welded longitudinally and then the ends are shrunk and sealed with mastic tape and open shrink wraps or welded with weld strips. The branch is sealed with mastic and a collar.

The foam holes are sealed with a weld plug on the main pipe and an expansion plug on the branch.

Description

The TSJoint with mastic consists of:

1. T-joint
2. Mastic tape
3. Open shrink wraps
4. Venting and weld plugs
5. Venting and expansion plugs
6. Collar

The TSJoint EW consists of:

1. T-joint
2. Weld strips
3. Venting and weld plugs
4. Venting and expansion plugs
5. Collar

Weld strips are ordered separately.

Weld strip

Is used to weld together the joint and the outer casing.

Weld strips, venting and weld plugs for 1 joint are delivered together in a bucket.

Component overview/data

Component No. 5556

Materials

Weld strip: Electro-plated mesh

The Bonded TwinPipe

Branches - BandJoint-branch Flextra Twin/Twin

Application

T-joint for foaming, used to branch with flexible pipe perpendicular to the main pipe.

The main pipe joint is made of PE with embedded copper wires for welding. The branch is made of cross-linked PE (PEX) and sealed with mastic and a collar.

The foam holes in the main pipe are sealed with welding plugs, in the branch with expansion plug and collar.

Description

BandJoint-branch Flextra for foaming consists of:

1. Branch with flexible connecting piece (PEX)
2. Venting and expansion plug for the branch
3. Branch collar
4. Accessories set for main pipe, delivered separately

Length, T-joint, main pipe, dimension
 ø125 – 200 mm = 570 mm

Length, T-joint, main pipe, dimension

The Bonded TwinPipe Branches - T-joint straight double

Application T-joint with 2 branches is used to branch from TwinPipe to single pipe, primarily FlexPipe.

If the T-joint will be used in connection with a hot tapping valve, please state this when ordering.

Description A complete T-joint straight consists of:

1. Main pipe joint with 2 branches
2. Collars for the 2 branches (4 pcs. in total)
3. Shrink wrap for main pipe joint incl. closure patch
4. Venting plugs
5. Expansion plugs
6. Wedge plugs

Reinforcement plate to reinforce the main pipe, if necessary, component No. 5426.

The Bonded TwinPipe Branches - Hot tapping valve

Application

Hot tapping valves are used to establish branches on pipelines in operation.

Max. pressure closed valve 16 bar. Operating pressure after establishment of branch: 25 bar.

Please note that reinforcement of the main pipe may be necessary, cf. LOGSTOR Design Manual.

For further details, see the product data sheet of the valve supplier.

Danfoss JIP

All hot tapping valves have a hexagon spindle and a hexagon plug.

The Bonded TwinPipe Branches - T-piece straight

Application

T-pieces straight for TwinPipe are reinforced to withstand axial forces corresponding to stresses of 330 MPa.

However, in case the main pipe and the branch have the same dimension, T-pieces can only withstand axial forces corresponding to 190 MPa.

Description

The branch of the T-piece has a fixing bar welded onto it.

If the T-piece is installed at the end of a section, fixing bar must be welded onto the main pipe.

Wires for surveillance are embedded.

All preinsulated T-pieces are as a standard delivered with 2 embedded wires: a copper wire and a tinned wire.

The tinned wire always runs into the branch, whereas the copper wire runs straight through.

Component
overview/data

Component No. 3490

Internal pressure = 25 bar (grey = 16 bar)

The Bonded TwinPipe Branches - T-piece straight

Wall thickness

ø 33.7-219.1:

T-pieces are made by collaring on base pipes with large wall thickness, cf. table with the following exceptions:

T-pieces with the same main pipe and branch dimension are made with weld-T-piece in accordance with EN 10253-2.

T-pieces for main pipe dimension ø 139.7-219.1 and branch one dimension smaller than the main pipe dimension will be carried out with direct branch on pipes with larger wall thickness.

The Bonded TwinPipe

Transition pipes - Merge pipe

Application

Merge pipes are used for transition from a single pipe to a TwinPipe.

Merge pipes are available in a type 1 and a type 2, both have fixing bar at the TwinPipe end.

The flow pipe is always placed at the bottom.

Type 1

In merge pipe type 1 the flow of the single pipe is placed to the left.

Component overview/data

The Bonded TwinPipe

Transition pipes - F-bend

Application

Transition bends are used for perpendicular transition from single pipe to TwinPipe.

Transition bends are available in type 1 and type 2, both have fixing bar at the TwinPipe end.

The flow pipe is always placed at the bottom.

Type 1

In transition bend, type 1 flow in the single pipe is placed to the left.

Component

Component No. 3072

The Bonded TwinPipe Stop valve

Application

In isolation valves and service valves spindles are embedded in the same casing, which is sealed with a stainless top.

The transition between the stainless top and the casing is sealed with a BXJoint

Valves are delivered with caps.

As a standard delivered with a reference point where the surveillance wires are led through the stainless spindle top.

For the screw cover of the reference point spanner size 27 is used. Alternatively, spanner size 55 can be used.

The stop valve have fixing bars welded onto both sides.

Description

Return spindles are approx. 20 mm higher than flow spindles.

LOGSTOR standard preinsulated isolation valve is either a Vexve valve or a Broen valve. The geometry, spanner width of the spindle and of the back-stop are the same regardless of which valve is delivered.

As a standard valves with reduced passage are delivered. On enquiry valves with full passage may be delivered.

Valve $\varnothing 219.1$ mm must be operated by means of a gear.

Valves $\varnothing 33.7$ - 168.3 mm can be operated by means of a tee key.

Valves $\varnothing 114.3$ - $\varnothing 219.1$ mm can be operated by means of a portable gear.

Materials

Preinsulated isolation valves comply with the requirements in EN 488.

The isolation valve is a ball valve, consisting of an all-welded casing and a polished stainless steel ball, fitted with spring loaded teflon seat.

The spindle top is made of stainless steel.

Other materials as for straight pipes.

Spare parts for reference point

Screw cover for fix reference point, product No.: 1220 0000 004 001

Brackets for fix reference point, product No.: 1997 0003 000 022

The Bonded TwinPipe

Service valve

Application

Preinsulated service valves are used for venting or drainage at wanted points in the pipe section.

If the components are installed at the end of a pipe section without e.g. a preinsulated bend, fixing bars must be welded on.

Service valves are delivered in series1 and 2.

Description

Return spindles are approx. 20 mm higher than the main spindle and the service valves on the flow pipe.

Materials

Ball valves: Stainless steel.

Other materials as for straight TwinPipes.

The Bonded TwinPipe Extension spindle

Application

Spindle extension for installation on installed valves whose spindle should be permanently extended.

In connection with permanent spindle extension the stop of the valve is repositioned in the extension.

The indicator for open/stop is positioned at the top of the extension.

The spindle extension can be used for valve dimensions 26.9 up to and including 219.1 mm on LOGSTOR preinsulated valves.

Description

A permanent spindle extension arrangement consists of:

1. Spindle
2. Spindle housing
3. Adapter

All external parts are made of AISI 316 steel.

The seal is made of rubber (NBR).

Contact LOGSTOR to learn how to protect the transition between spindle top on the preinsulated valve and spindle extension against water ingress.

Sealing is carried out with Nitto 57GO and Nitto 51 tape.

Component overview/data

Component No. 4285

4285 0500 013 001	219.1	50/90	500

On enquiry spindle extension is available in offsets of 250 mm in lengths from 500-2000 mm.

The Bonded TwinPipe Drainage valve

Application

Preinsulated drainage valves are used where a permanent draining possibility is wanted e.g. for an inspection chamber i.

They are usually installed on a short house connection.

Drainage valves are delivered in series 1 and 2 with Nordic surveillance wires.

At the TwinPipe end fixing bars are welded on.

Description

Return spindles are approx. 20 mm higher than the main spindle and the service valves on the flow pipe.

The Bonded TwinPipe Disposable valve

Application

Disposable valves are e.g. used in connection with branches and terminations where pipelines will not be extended until later.

The valve is temporarily covered with a foamed end fitting.

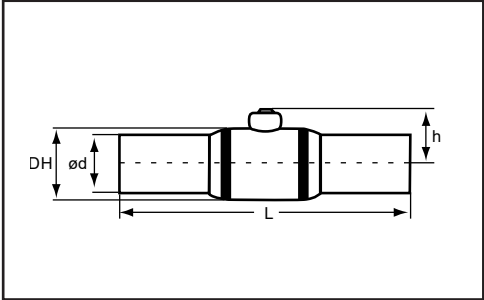

When the pipeline is extended and the valve is opened the spindle is fully welded.

Please have the internal space requirements in mind, when choosing the dimension of the temporary end fitting and the later permanent casing joint. This depends on whether the valve has a reduced or a full passage.

For further details, see the product data sheet of the valve supplier.

Description

Rustproof ball valve with weld-on ends.

Technical

In connection with TwinPipes it may be necessary to displace the valves in relation to each other.

Component overview/data

Component No. 4264

The Bonded TwinPipe

Reductions - Weld reduction eccentric

Description

For a few TwinPipe dimensions an eccentric weld reduction can be welded between the 2 dimensions.

Eccentric weld reduction complies with EN 10253-2.

Component
overview/data

Component No. 1006

Weld reduction

d2	d1

The Bonded TwinPipe Reductions - EWJoint reduction

Application

Reduction with weld joints can be carried out with EWJoint reduction in dimensions and dimensional offsets as described below.

It is also possible to use BandJoint as a reduction joint. Dimensional offsets for different dimensions are described in the section "Casing Joints"

Description

EWJoint reduction:

Component No. 5028.

Accessories set:

- EW welding strips and plugs,

Component No. 5556.

Order 1 set for each dimension. The two sets cover two reductions.

The Bonded TwinPipe
Reductions - EWJoint reduction

Weld strip	Is used to weld together the joint and the outer casing. Weld strips, venting and weld plugs for 1 joint are delivered together in a bucket.
Component overview/data	Component No. 5556
Materials	Weld strip: Electro-plated mesh

The Bonded TwinPipe Reductions - SX-WPJoint reduction

Application

Reduction joint set for TwinPipe can be used for the steel pipe dimensions, described in below table.

Always install fixing bars on the large dimension.

The design rules must be observed in connection with reductions.

Description

Reduction with SXJoint can be carried out with SX-WPJoint reduction.

Component overview/data

Component No. 5032

SX-WPJoint reduction

Accessories

To be foamed with foam pack, component No. 0700.

When ordering state insulation series, and that foam pack must be included in the delivery.

Weld reductions eccentric, component No. 1006

Fixing bars, component No. 1998.

The Bonded TwinPipe Reductions - B2SJoint reduction

Application

Reduction joint set for TwinPipe can be used, where the distance between the two service pipes is small. If the distance between the two service pipes are big, then the eccentric weld reduction cannot be installed.

Fixing bars must always be installed on the large dimension.

The design rules must be observed in connection with reductions.

Description

Reduction with B2SJoint:

1. PE reduction shrink sleeve
2. Open shrink wraps with closure patches
3. Mastic strips
4. Weld plugs
5. Venting plugs

The Bonded TwinPipe

Terminations - House entry pipe

Application

Preinsulated house entry bends comply with the requirements in EN15698-2 and can be used for a max. operating pressure of 25 bar.

Description

As a standard house entry bends are delivered with a pipe routing as it appears from the illustration, named type 1.

Fixing bars are welded onto the horizontal part of the bends.

One pipe is marked with tape at both ends.

House entry bends are also available as type 2.

Component

Materials

All materials are the same as for straight pipes: steel/PUR/PE-HD.

The Bonded TwinPipe

Terminations - Wall entry sleeve

Application Where pipes are installed through masonry - at wells, footings etc. - wall entry sleeves are installed as a seal against water ingress.

Exposed to groundwater pressure the wall entry sleeves may not be watertight. In such cases please contact LOGSTOR.

If wall entry sleeves which can withstand large axial movements are required, please contact LOGSTOR.

Description Note! De - 2 x 18 mm is smaller than the nominal diameter, so the sleeve fits tightly around the outer casing.

Component overview/data Component No. 5800

The Bonded TwinPipe

Terminations - Radon-tight wall entry sleeve

Application Where pipes are installed through masonry - at wells, footings etc. - wall entry sleeves are installed as a seal against water ingress.

Description This wall entry sleeve is radon-tight.
The wall entry sleeve can withstand a water pressure of 4 m, if there is no movement.
If there are minor movements ± 5 mm, the wall entry sleeve can withstand a water pressure of 1 m.

Dimensions:

110 – 180 mm:

- A = 40 mm and B = 22 mm

200 - 900 mm:

- A = 50 mm and B = 27 mm

Component overview/data Component No. 5800

Materials Rubber: EPDM
Strap: Steel (Aluzink)

The Bonded TwinPipe Terminations - End cap

Application

The end cap is used to seal the pipes in order to prevent moisture from penetrating into the insulation.

End caps are used in connection with house entries, terminations in chambers, connections to concrete ducts, in cellars etc.

Description

The end cap has integrated mastic and is shrink onto the service pipe and outer casing.

It is made of cross-linked PE (PEX) and can be used at continuous operating temperature up to 120°C and a peak temperature (short-term) of up to 130°C.

Component overview/data

Component No. 5600

The Bonded TwinPipe
Terminations - End fitting for foaming

Application End fitting with a closed end is used for temporary termination in the ground. The outmost part of the end fitting is shrinkable.

The end fitting for TwinPipe is foamed.

Fixing bars must be used, if the end fitting is on a straight pipe section.

- Description** The end fitting for foaming consists of:
- 1. Closed shrink sleeve
 - 2. Open shrink wrap
 - 3. Closure patch
 - 4. Weld plugs
 - 5. Venting plugs

Component overview/data Component No. 5700

The FlexPipe

PertFlextra - General

Application

The LOGSTOR flexible PE-RT system is used within District Heating for distribution and service pipelines.

Due to the properties of the PE-RT service pipe, expansion must not be taken into consideration. The flexibility, low weight, and long lengths make the installation quicker and more inexpensive. PertFlextra is especially suitable for:

- distribution networks
- branch pipes without joints
- passage of vegetation and other obstacles
- hilly areas

The pipe system complies with the requirements in prEN17878-1 and prEN17878-2 for a minimum design service life of 50 years at the following operational conditions:

Operating temperature:

70°C for 49 years

Maximum operating temperature:

80°C for 7760 hours

Malfunction:

95°C for 100 hours

Maximum operating pressure:

10 bar

Other pressure and temperature profiles than the above are possible. Please contact LOGSTOR for a calculation of the estimated service life.

If temperature profile is calculated like in EN15632-2 or prEN17878-2, the service life will be 30 years with pressure 8 bar instead of 6 bar. Calculation according to Miner's rule EN13760.

PertFlextra can be combined with the other LOGSTOR systems provided that the above temperatures and pressure are observed.

To join PE-RT service pipes in buried systems press couplings are used. For jointing in buildings, chambers, and cabinets compression couplings can be used.

Description

The standard coil length is 100 m.

Fixed lengths can be ordered to measure in lengths of min. 10 m and max. 90 m.

Always delivered without free ends.

The max coil width is 2.4 m.

All pipes are produced in accordance with prEN17878-1 and prEN17878-2.

The FlexPipe

PertFlextra - General

Materials

Service pipe: PE-RT type II SDR 7,4 with an aluminum diffusion barrier and a PE-RT protection layer.

The aluminum diffusion barrier is a barrier for oxygen diffusing from the outside into the media, and for water vapor diffusing from the media out into the insulation. This ensures that the insulation stays dry over lifetime.

Insulation: Polyurethane foam. Average thermal conductivity $\lambda_{50} = 0.022 \text{ W/mK}$

Outer casing: Polyethylene, PE-HD with co-extruded polymer diffusion barrier ensuring that the insulation gases stay in the PUR-foam during the service life.

The FlexPipe

PexFlextra - General

Application

The LOGSTOR flexible PEX system is used within District Heating for distribution and transmission pipelines.

Due to the properties of the PEX service pipe, expansion must not be taken into consideration. The flexibility, low weight, and long lengths make the installation quicker and more inexpensive. PexFlextra is especially suitable for:

- branch pipes without joints
- passage of vegetation and other obstacles
- hilly areas

The pipe system complies with the requirements in EN15632-2 for a minimum design service life of 30 years at the following operational conditions:

Operating temperature: 80°C for 29 years

Maximum operating temperature:

90°C for 7760 hours

95°C for 1000 hours

Malfunction: 100°C for 100 hours

Maximum operating pressure: 6 bar

Other pressure and temperature profiles than the above are possible. Please contact LOGSTOR for a calculation of the estimated service life.

PexFlextra can be combined with the other LOGSTOR systems provided that the above temperatures and pressure are observed.

To join PEX service pipes in buried systems press couplings are used. For jointing in buildings, chambers, and cabinets compression couplings can be used.

Description

The standard coil length is 100 m.

Fixed lengths can be ordered to measure in lengths of min. 10 m and max. 90 m.

Corrugated casings with 90 and 110 PEXa are, however, as a standard delivered in 30, 50, 70, and 100 m and are usually not delivered in fixed lengths.

Always delivered without free ends.

The max coil width is 2.4 m.

All pipes are produced in accordance with EN15632-1 and EN15632-2.

Materials

Service pipe: PEXa with external EVOH oxygen diffusion barrier, preventing oxygen ingress. The diffusion barrier is not a barrier for water vapour diffusion. The material complies with the requirements in EN ISO 15875.

Insulation: Polyurethane foam. Average thermal conductivity $\lambda_{50} = 0.022 \text{ W/mK}$

Outer casing: Polyethylene, PE-HD with co-extruded polymer diffusion barrier for insulating gases.

The FlexPipe

PexFlextra - Preinsulated fittings

General

For PexFlextra preinsulated fittings with service pipes in PEX can be used.

Preinsulated fittings with PEX service pipe are delivered without free pipe ends. The service pipe must not be shortened.

T-pieces with PEX service pipe are made with press couplings, embedded in the insulation.

Alternatively, preinsulated fittings with steel service pipe from single pipe or TwinPipe can be used. Press couplings with weld end are bought separately and welded on site.

Merge pipe

The FlexPipe

AluFlextra - General

Application

AluFlextra is used within District Heating for distribution and transmission pipelines.

Due to the properties of the PE-RT/aluminium/PE-RT service pipe, expansion must not be taken into consideration. The flexibility, low weight, and long lengths make the installation quicker and more inexpensive. AluFlextra is especially suitable for:

- branch pipes without joints
- passage of vegetation and other obstacles
- hilly areas

The pipe system complies with the requirements in EN15632-2 for a minimum design service life of 30 years at the following operational conditions:

Operating temperature: 80°C for 29 years

Maximum operating temperature:

90°C for 7760 hours

95°C for 1000 hours

Malfunction: 100°C for 100 hours

Maximum operating pressure: 10 bar

AluFlextra can be combined with the other LOGSTOR systems provided that the above temperatures and pressure are observed.

Other pressure and temperature profiles than the above are possible. Please contact LOGSTOR for calculation of the estimated service life.

The PE-RT/aluminium/PE-RT service pipes are joined with press couplings.

For pipe systems with AluFlextra preinsulated steel fittings from the bonded pipe system or TwinPipes with press couplings which are welded onto one or more pipe ends can be used Press couplings with weld end are bought separately and welded on site.

Description

The standard coil length is 100 m.

Fixed lengths can be ordered to measure in lengths of min. 10 m and max. 90 m.

Delivered without free ends.

The max coil width is 2.4 m.

All pipes are produced in accordance with EN15632-1 and EN15632-2.

Materials

Service pipe:

Multilayer PE-RT/aluminium/PE-RT or PEX/aluminium/PEX

The material complies with the requirements in EN ISO 21003-2.

The 15,000 h thermal stability test according to EN15632-2:2022 is in progress, but not yet completed, so the test requirements are still fulfilled according to the previous version of EN15632-2

Insulation: Polyurethane foam

Average thermal conductivity $\lambda_{50} = 0.022 \text{ W/mK}$

Outer casing:

Polyethylene, PE-HD with co-extruded polymer diffusion barrier for insulating gases.

The FlexPipe

CuFlex - General

Application

CuFlex is used within District Heating for distribution and transmission pipelines.

Due to the properties of the soft copper pipe, allowance must not be made for expansion. The flexibility, low weight, and long lengths make the installation quicker and more inexpensive. CuFlex is especially suitable for:

- branch pipes without joints
- passage of vegetation and other obstacles
- hilly areas

The pipe system complies with the requirements in EN15632-2 for a minimum design service life of 30 years at the following operational conditions:

Continuous operation with hot water at up to 120°C and at individual time intervals with a peak temperature up to 140°C. The sum of these individual time intervals shall not exceed 300 hours a year.

Operating pressure max.: 16 bar.

CuFlex can be combined with the other LOGSTOR systems.

As for preinsulated fittings with copper service pipe, see the copper pipe system.

Copper service pipes are joined with solder joint fittings or press couplings.

Description

The standard coil length is 100 m.

Fixed lengths can be ordered to measure in lengths of min. 10 m and max. 90 m.

CuFlex is as a standard delivered with embedded copper wires for surveillance.

Delivered without free ends.

The max coil width is 2.4 m.

All pipes are produced in accordance with EN15632-4.

Materials

Service pipe: Soft annealed copper Cu-DHP-CV024A-H40 after EN 12449.
Tolerances after EN 1057.

Insulation: Polyurethane foam

Blowing agent: Cyclopentane. Average thermal conductivity $\lambda_{50} = 0.022 \text{ W/mK}$

Outer casing: Polyethylene, PE-LD with internal aluminium diffusion barrier for insulating gases.

FXJoint

SX-WPJoint

C2FJoint

The FlexPipe

Casing joints - FXJoint

Application

Shrink sleeve in cross-linked PE with insulation shells in polyurethane (PUR).

The FXJoint is to be used for PexFlextra and AluFlextra. The insulation shell is with a flexible core to ensure space for the coupling.

The shrink sleeve can be used for reduction. The dimensional limits appear from below table.

Allowing for the insulation shells, order the largest dimension.

Major reductions can be carried out by combining two sleeves – a small and a big one

Description

The FXJoint consists of:

1. Insulation shells
2. Shrink sleeve with integrated mastic

Note! Insulation shells and shrink sleeve are ordered separately

The FlexPipe

Casing joints - SX-WPJoint

Application

Shrink sleeve made of cross-linked PE (PEX) for foaming. The sleeve is shrinkable at both ends, and the foam holes are sealed with weld plugs.

Pre-install the shrink sleeve on the pipe prior to welding the service pipe together.

The shrink sleeve can as a standard be reduced by one dimensional offset. See below table.

When installed on pipes with corrugated casing the sleeve ends are sealed with additional collars to be ordered separately.

Description

The SX-WPJoint consists of:

1. Shrink sleeve with integrated mastic
2. Venting plugs
3. Weld plugs

Delivered in white PE-foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60° C

TSJoint

T-Joint straight

Y-Joint

The FlexPipe Branches - SXT-WPJoint

Application

T-joint for foaming. Made of cross-linked PE (PEX) with flanges and bolts in acid-resistant steel AISI 316 L. The T-joint is shrinkable and the foam holes are sealed with weld plugs.

The SXT-WPJoint can be used to branch from a bonded steel pipe system.

The SXT-WPJoint can be used to branch perpendicular to or parallel with the main pipe.

The SXT-WPJoint cannot be used for installation of the T-shoe on a FlextraPipe.

The SXT-WPJoint can be used together with a hot tapping valve. The insulation thickness around the valve casing will be thinner.

Installation on FlextraPipe with corrugated casing requires that the branch be secured with an extra collar, which is ordered separately.

Description

The SXT-WPJoint consists of:

1. Main pipe joint
2. Branch pipe joint
3. Venting plugs
4. Weld plugs
5. Connecting piece with spacers
(to be ordered separately)

Max. temperature during transport and storage: 60°C.

88.9	222	165
114.3	170	170

The FlexPipe Branches - TXJoint

Application

T-joint for foaming, used to branch perpendicular to the main pipe.

The T-joint is made of PE and the shrink sleeve of cross-linked PE (PEX).

If it is to be used in connection with hot tapping, this must be stated when ordering.

Installation on pipes with corrugated casing requires that the branch be sealed with an extra collar, which is ordered separately.

As a standard TXJoint is double sealed on the T-shoe. The branch can be double sealed by installing open shrink wrap on transition between T-shoe and SX-WPJoint and collar towards the flexible pipe.

Description

The TXJoint consists of:

1. Main pipe joint
2. Open shrink wraps
3. Closure patches
4. Shrink wrap
5. Closure patch
6. SX-WPJoint
7. Venting plugs
8. Weld plugs

The branch pipe piece of the T-shoe is one dimension larger than the dimension of the pipe to connect to. The SX-WPJoint then reduces to the dimension of the pipe to connected to.

The FlexPipe Branches - TSJoint

Application

T-joint for foaming, used to branch perpendicular to or parallel with the main pipe. The main pipe is made of weldable PE and the branch of cross-linked PE (PEX). The T-joint is shrinkable.

The main pipe is extrusion welded longitudinally, and then the ends are either shrunk onto the mastic tape and sealed with open shrink sleeves or welded with weld strips like the EWJoint.

The branch is shrunk onto the embedded mastic and sealed with a collar.

Foam holes are sealed with weld plugs in the main pipe and with expansion plugs in the branch.

The TSJoint can be used together with a hot tapping valve. The insulation thickness around the valve casing will be thinner.

TSJoint main pipe $\varnothing 450$ mm can be used as a saddle solution for outer casing $\varnothing 355$ - $\varnothing 560$ mm.

Description

The TSJoint with mastic consists of:

1. T-joint
2. Mastic tape
3. Venting plugs
4. Weld plugs
5. Venting and expansion plugs
6. Collar
7. 45° or 90° connecting piece (to be ordered separately)
8. Open shrink wraps

The TSJoint EW consists of:

1. T-joint
2. Weld strips
3. Venting plugs
4. Weld plugs
5. Venting and expansion plugs
6. Collar
7. 45° or 90° connecting piece (to be ordered separately)

Max. temperature during transport and storage: 40°C.

Length T-joint main pipe = 650 mm* Max branch ø90 mm** Max branch ø110 mm*** Max branch ø140 mm

Materials

T-shoe, base pipe: HDPE

T-shoe, branch: Cross-linked PE, PEX

Venting plug, base pipe: Polypropylene

Venting plug, branch: LDPE

Weld plugs: HDPE

Collar: PEX with PIB-based mastic

Sealing strip: PIB-based

Weld strip: Electro-plated net

Accessories

To be foamed with foam packs, component No. 0700.

When ordering state insulation series, and that delivery must include foam packs.

Reinforcement plate to reinforce the main pipe, if necessary, component No. 5426.

The FlexPipe Branches - TSJoint

Component overview/data

Component No. 5251

88.9	160	222	165

Weld strip

Is used to weld together the joint and the outer casing.

Weld strips, venting and weld plugs for 1 joint are delivered together in a bucket.

Component overview/data

Component No. 5556

Materials

Weld strip: Electro-plated mesh

The FlexPipe Branches - T-joint straight

Application T-joint straight is used to branch on FlexPipes. Available with insulation shells or for foaming.

T-joint straight with insulation shells can be used for AluFlextra and PexFlextra,

Description T-joint straight with insulation shells consists of:

1. Closure patch
2. Shrink wrap
3. Insulation shell
4. T-shoe
5. Insulation shell
6. Collar

T-joint straight for foaming consists of:

1. Closure patch
2. Shrink wrap
3. T-shoe
4. Collars
5. Venting and expansion plugs

Materials T-shoe: HDPE
Venting plugs: Polypropylen
Collars: PEX with PIB-based mastic
Shrink wrap: PEX with PIB-based mastic and hotmelt

Accessories To be foamed with foam packs, component No. 0700.
When ordering state insulation series, and that delivery must include foam packs.

The FlexPipe Branches - Y-joint

Application

Y-Joint is used as a means of transition from TwinPipe to single pipe.

All 3 ends of the joint are shrinkable and embedded with mastic.

Y-Joint is double sealed.

Description

Y-Joint consists off:

1. Sleeve with integrated sealing compound
2. Pipe insulation
3. Venting plugs
4. Weld plugs
5. Collars

Sleeve and accessories are delivered in a bag.

Max. temperature during transport and storage: 40°C.

Component overview/data

Terminations - Wall entry sleeve

Application

Where pipes are installed through masonry - at wells, footings etc. - wall entry sleeves are installed as a seal against water ingress.

Exposed to groundwater pressure the wall entry sleeves may not be watertight. In such cases please contact LOGSTOR.

If sealing rings which can withstand large axial movements, please contact LOGSTOR.

Description

The wall entry sleeves allow minor axial expansion movements at the entry point.

Note! De - 2x 18 mm is smaller than the nominal diameter, so the sleeve fits tightly around the outer casing.

Component overview/data

Component No. 5800

The Copper Pipe

General

Application	<p>The copper pipe system is a complete transmission and distribution system for district heating and cooling.</p> <p>All specifications in this catalogue section are based on:</p> <p>Max. operating pressure = 16 bar</p> <p>Continuous operating temperature = 120°C</p> <p>Peak load temperature = Max. 140 °C. The sum of the various time intervals must not exceed 300 h per year.</p> <p>Max. external temperature load (casings) = 50°C</p>	
Description	<p>A preinsulated copper pipe consists of:</p> <ol style="list-style-type: none">1. Service pipe (1 or 2): Copper2. Insulation: Polyurethane foam3. Outer casing: Polyethylene, PE-HD4. Wires for surveillance: Copper (one is tinned)5. Pipe label	
Copper pipe	<p>Type: Soft, drawn, seamless pipes designed for capillary soldering</p> <p>Dimensions: In accordance with EN 12449</p> <p>Material: In accordance with EN 12449</p> <p>Copper content: 99.85% weight</p> <p>P-content: 0.015 - 0.040% weight</p> <p>Ultimate stress: 210-270 N/mm²</p> <p>Elongation at break: Min. 40%</p> <p>Hardness: Vicker's hardness, approx. 55 HV</p> <p>Inspection certificate: EN 10204 - 3.1.</p>	
Insulation	<p>Polyurethane foam: Properties: Minimum as required in EN 253</p> <p>Blowing agent: Cyclopentane</p> <p>Insulating property: Thermal conductivity (50°C): < 0.027 W/mK*</p> <p>*)These lambda values are based on an average of the continuous measurements.</p> <p>The calculation program Calculator always include the updated values. See www.logstor.com/Calculator.</p>	

The Copper Pipe

General

Outer casing

Polyethylene:

PEHD, bimodal (min. PE 80, ISO 12162)

Properties: Minimum as required in EN 253

All parts are fully weldable within the melt flow index: MFR variation ≤ 0.5 g/10 min

Thermal stability:

Oxydation induction time (OIT): > 30 min at 210° C

Resistance against crack formation:

Stress crack resistance (notch sensibility): > 300 h (full notch, 4 MPa, 80° , EN 253)

Internal surface treatment:

All outer casings are corona treated during production. This ensures an optimum adhesion between casing and insulation.

Finished pipe

Free service pipe end: $220 \text{ mm} \pm 10 \text{ mm}$

Lengths delivered: 12 m

Surveillance system

The copper pipes are delivered with 2 copper wires, embedded in insulation (Nordic System).

Wires: 1.5 mm^2 copper wires (one is tinned)

Distance to service pipe: 15 mm

Position in top: $\pm 3\text{-}20$ cm from 12 o'clock position

The embedded copper wires are the backbone of the electronic surveillance systems which are available for most of our pipelines.

See description in the Surveillance Handbook.

The Copper Pipe Pipes

Application

Preinsulated copper pipes are available in two variants for common construction work within district heating and cooling.

- Single pipe; one service pipe in one casing
- TwinPipe; two service pipes of the same dimension in one casing

All preinsulated copper pipes are 12 m long and supplied with embedded copper wires for surveillance.

The Copper Pipe
Casing joints - BandJoint

Application

The BandJoint is an open PE weld joint with integrated copper wires in the weld zone.

Can be used for reduction when the difference in casing diameter is max. 25 mm. See the section "Reduktions".

LOGSTOR WeldMaster is used to weld the BandJoint.

Not applicable for flexible pipes.

BandJoint ø 90-200 mm

LOGSTOR WeldMaster is used to weld BandJoints.

Delivered with pre-drilled holes for foaming.

Delivered 2 pcs., packed in white PE foil.

To be stored vertically.

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5610

BandJoint ø 90-200 mm

BandJoint length L, mm	Casing dimension, mm	
	90-125	140-200

* Depth guard XL is used for repairs.

The Copper Pipe Casing joints - EWJoint

Application

Applicable for casing diameters $\varnothing 125 - 200$ mm.

Pre-install the joint prior to welding the service pipe together.

The joint is welded together with the outer casing by means of a loose weld strip between the joint and the outer casing. LOGSTOR WeldMaster is used to weld the EWJoint.

Not applicable for flexible pipes.

Description

The EWJoint consists of:

1. Shrink sleeve
2. Weld strip
3. Venting plugs
4. Weld plugs
5. Staples to fix weld strips

The sleeves are delivered wrapped in white PE foil.

The accessories 2-4 for one EWJoint are delivered separately in a plastic bucket.

Staples (5) are ordered separately

Store the sleeve vertically.

Max. temperature during transportation and storage: 40°C.

90-400	9050 0000 031 053

The Copper Pipe Casing joints - SX-WPJoint

Application

Shrink sleeve made of cross-linked PE (PEX) for foaming. The sleeve is shrinkable at both ends, and the foam holes are sealed with weld plugs.

Pre-install the shrink sleeve on the pipe prior to welding the service pipe together.

The shrink sleeve can as a standard be reduced by one dimensional offset. See below table.

When installed on pipes with corrugated casing the sleeve ends are sealed with additional collars to be ordered separately.

Description

The SX-WPJoint consists of:

1. Shrink sleeve with integrated mastic
2. Venting plugs
3. Weld plugs

Delivered in white PE-foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60° C

Component overview/data

Component No. 5031

180					x	x

L = 650 mm

Materials

Sleeve: Cross-linked PE (PEX)

Mastic: PIB-based mastic

Venting plugs: Polypropylene

Weld plugs: HDPE

Accessories

To be foamed with foam pack, component No. 0700.

When ordering state insulation series, and that foam pack must be included in the delivery.

Collar for corrugated casing, component No. 5500. Order 2 pcs. per joint.

The Copper Pipe

Casing joints - BXJoint

Application

Shrink sleeve made in cross-linked PE (PEX) with insulation shells of polyurethane (PUR).

BXJoint is double sealed. Applicable for casing dimensions \varnothing 90-200 mm.

Pre-install the shrink sleeve on the pipe prior to welding the service pipe together.

Can be used for reduction. The dimensional limits appear from the table. Due to the insulation shells the largest dimension is ordered.

Description

The BXJoint consists of:

1. PEX shrink sleeve with integrated hot-melt and mastic
2. Insulation shells
3. Shrink film

Delivered in white PE foil.

Store the shrink sleeve vertically.

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5022

Materials

Shrink sleeve: Crosslinked PE (PEX)

Mastic: PIB-based mastic

Insulation shells: PUR

Shrink film: PEX with PIB-based mastic

The Copper Pipe

Directional changes - 90° bend

Application

The preinsulated 90° bends in this section are used for directional changes.

If preinsulated bends in other angles are used, it must be ascertained, that no harmful bending impacts arise.

Description

Preinsulated horizontal bends for single pipes are available for operating pressure: 16 bar.

All bends have embedded copper wires for surveillance.

Component overview/data

Component No. 2500

The Copper Pipe Branches - General

Description

For the copper pipe system LOGSTOR can deliver a number of different branch types and combinations dependent on dimension, kind of project, and the customer's actual wishes:

- From single pipe to single pipe, TwinPipe to TwinPipe:

· SXT-WPJoint

· T-joint straight

· TXJoint

- Preinsulated branches

Connection with soldering-T:

- Dimension copper pipe, main pipe:

18 - 70 mm

- Dimension copper pipe, branch:

18 - 70 mm

The Copper Pipe Branches - SXT-WPJoint

Application

T-joint for foaming. Made of cross-linked PE (PEX) with flanges and bolts in acid-resistant steel AISI 316 L. The T-joint is shrinkable and the foam holes are sealed with weld plugs.

The SXT-WPJoint can be used to branch perpendicular to or parallel with the main pipe.

The SXT-WPJoint can be used together with a hot tapping valve. The insulation thickness around the valve casing will be thinner.

Installation on FlextraPipe with corrugated casing requires that the branch be secured with an extra collar, which is ordered separately.

Description

The SXT-WPJoint consists of:

1. Main pipe joint
2. Branch pipe joint
3. Venting plugs
4. Weld plugs
5. Connecting piece with spacers

Max. temperature during transport and storage: 60°C.

Component overview/data

Component No. 5210

Component Nos.: Main pipe joint:5210 - Branch pipe joint: 5211

200	x	x	x	x	x	x	x

L= 680 mm, if branch is 90 - 140 mm and 720 mm, if branch is 160 - 200 mm

Materials

Shrink sleeve: Crosslinked PE, PEX

Mastic: PIB-based mastic

Venting plugs: Polypropylene

Weld plugs: HDPE.

Flanges and bolts: Acid-resistant steel AISI 316L

Accessories

To be foamed with foam packs, component No. 0700.

When ordering state insulation series, and that delivery must include foam packs.

The Copper Pipe Branches - SXT-WPJoint

Measurements and combinations

The connecting piece of the main pipe fits several branch pipe joints and the branch pipe joint fits several branch dimensions.

The possible combinations appear from below table.

Component overview/data

Component No. 5210

Component No. 5210/5211

Main pipe joint			Branch pipe joint D2, mm				
			90-110	110-125	125-140	140-160	180-200

140	170	680		160	160		
160	170	680		160	160		
180	190	680		180	180	180	
200	170	680		160	160		
	230	720				220	220

The Copper Pipe
Branches - TXJoint

Application

T-joint for foaming, used to branch perpendicular to the main pipe.

The T-joint is made of PE and the shrink sleeve of cross-linked PE (PEX).

If it is to be used in connection with hot tapping, this must be stated when ordering.

Installation on pipes with corrugated casing requires that the branch be sealed with an extra collar, which is ordered separately.

As a standard TXJoint is double sealed on the T-shoe. The branch can be double sealed by installing open shrink wrap on transition between T-shoe and SX-WPJoint and collar towards the flexible pipe.

Description

The TXJoint consists of:

- 1. Main pipe joint
- 2. Open shrink wraps
- 3. Closure patches
- 4. Shrink wrap
- 5. Closure patch
- 6. SX-WPJoint
- 7. Venting plugs
- 8. Expansion plugs

The branch pipe piece of the T-shoe is one dimension larger than the dimension of the pipe to connect to. The SX-WPJoint then reduces to the dimension of the pipe to connected to.

The Copper Pipe Branches - T-joint straight

Application T-joint straight is used to branch on copper pipes and FlexPipes.
The T-joint is for foaming.

Description T-joint straight for foaming consists of:

1. Closure patch
2. Shrink wrap
3. T-shoe
4. Collars
5. Venting and expansion plugs

**Component

Accessories To be foamed with foam packs, component No. 0700..
When ordering state insulation series, and that delivery must include foam packs.

The Copper Pipe Branches - Preinsulated T-fittings

Application Preinsulated branches are an alternative to branch fittings.

There are two types of branches:

- straight horizontal branches in TwinPipe
- 45° branches in single pipe and TwinPipe

Description The branches are available for operating pressure: 16 bar.

All branches have embedded copper wires for surveillance.

The position of surveillance wires in TwinPipe straight branches appear from the illustration.

The Copper Pipe Terminations

House entry pipe Preinsulated 90° house entry pipes are used for introduction into buildings without cellar.

Description

The bends are available for operating pressure: 16 bar.

The copper pipes are bent mechanically.

All bends are delivered with embedded copper wires for surveillance.

In TwinPipe house entries the vertical pipes have been turned, so they are parallel with the wall.

Matching pipe ends are marked with a colour code.

The shown pipe route is the standard.

Component overview/data

125	x
140	x
160	x
200	x

See foam pack table in the Foam Pack Folder.

The Copper Pipe Terminations

End fitting with insulation shells

To terminate a pipe system a PE end fitting is used.

Description

The end fitting with insulation shells are used for single pipes.

It consists of:

1. End fitting, expanded
2. Insulation shells
3. Open shrink wrap
4. Closure patch

Dimension to order

The end fitting is ordered after the outer casing dimension regardless of service pipe dimension. In some casings this results in air between the service pipe and the insulation shell, but is not of practical significance.

700 mm end fittings are always used in connection with intermediate disposable valves.

Component overview/data

Component No. 5700

The Copper Pipe Terminations

Wall entry sleeve For sealing between outer casing and the surrounding concrete in connection with termination in wall, wall entry sleeves for all TwinPipe dimensions are available.

(Also see the Single Bonded Pipe System).

Component overview/data Component No. 5800

Insulating joints

Overview

Description

Joints in the pipe system are best insulated with foam packs. It is an easy-to-apply method according to which a two-component foam liquid, after mixing and filling, forms an effective insulation with the same properties as in the rest of the pipe system.

The work with foam packs requires a valid isocyanate training.

Contents

Foam pack

Other insulation methods

Insulating joints

Foam pack

Application

Foam packs are used to insulate joints.

Foam packs are easy to apply and the fitter does not come into contact with the liquids.

After mixing and filling in the two foam liquids, an efficient insulation is formed which has the same properties as the rest of the pipe system. Foam packs comply with the requirements to materials in EN 253.

If 2 foam packs are required per casing joint, preparations must be made, so they can be filled into the joint immediately after each other. It may be an advantage to be 2 persons to carry out the task.

If 3 or 4 foam packs are required per casing joint, 2 foam packs must be filled in simultaneously. This requires that an additional venting hole be drilled. Remember to order an additional plug set.

Foam packs have a time limit for use of 18 months counting from the stated production week, provided they are stored correctly.

Description

Foam packs are supplied in insulation boxes. The box i.a. contains a foam pack folder, from which it appears which foam pack size to use for which casing joint, as well as a leaflet with addresses and safety instructions.

The total weight of the foam packs and the box is max. 20 kg.

Foam packs are not returnable.

The foam pack is marked with isocyanate (A) and polyol/cyclopentane (B), respectively, as well as their hazard symbols.

Product No., foam pack No., and production week also appear from the bag.

Safety information/folder

One side of the bag contains separate safety information about the polyol/cyclopentane part of the bag and a separate safety information about the isocyanate part of the bag. The safety information is available in multiple languages.

This complies with the requirements in the EU-REACH CLP regulation.

The safety information is in folders, glued onto the bag. The folders can be opened, so the different languages appear.

Each insulation box also includes a printed version of the safety information.

Insulating joints

Materials

The insulation box:

Polystyrene foam (EPS)

Foam pack:

Multi-ply plastic bag with diffusion-tight aluminium foil for liquid A and B.

Liquid A: Isocyanate, MDI

Liquid B: Polyol and cyclopentane

Material Safety Data Sheet

A detailed MSDS for foam pack is available on our website www.logstor.com.

The MSDS contains 16 items of information.

Scanning the QR code on the bag with a mobile phone gives direct access to safety information about isocyanate and polyol/cyclopentane respectively on our website www.logstor.com.

Insulating joints

Foam pack

Foam volume

The volume of the cavity to foam decides which foam pack size to choose.

To ensure the quality of the finished insulation the foam volume limits in below table must be observed.

Size and number of foam packs for a specific casing joint appear from the foam pack folder for single pipe and TwinPipe which is available on LOGSTOR's website www.logstor.com and in the insulation box.

Other insulation methods - General

Description

LOGSTOR always recommends the use of foam pack to insulate joints, because the security of correct foaming is high.

However, there may be customers' requirements and markets for which alternative insulation methods are relevant.

The alternatives recommended by LOGSTOR are described in the following. However it is essential to make sure that:

- local environmental and safety requirements are complied with (responsibility of other employer)
- approved liquids are used
- fitters/operators comply with the instructions for foaming

Contents

Other insulations methods - Can foam *

Other insulations methods - Machine foam

*) Not allowed in all countries

Other insulation methods - Can foam

Application	<p>The can foam - containing the 2 foam liquids, isocyanate and polyol/cyclopentane - are apportioned and mixed in open cans.</p> <p>Can foam has a time limit for use of 12 months counting from the stated production week, provided it is stored correctly.</p>
Description	<p>Can foam is delivered with the same requirements to strength and insulation properties as the ones to foam pack.</p> <p>As dosage is often made without LOGSTOR's participation, LOGSTOR makes no guarantees.</p> <p>Please note! The use of can foam is not approved in all countries.</p> <p>Can foam is available in cans with 10 kg isocyanate and 10 kg polyol/cyclopentane respectively.</p> <p>Liquid A, isocyanate, MDI: product No. 0700 0000 007 002.</p> <p>Liquid B, polyol/cyclopentane: product No. 0700 0000 007 008.</p> <p>Can foam is not returnable!</p>
Foam quantities	<p>As to volume liquid A (isocyanate) and liquid B (polyol/cyclopentane) is mixed in the relation 1.4:1. (A change in the foam recipe may change this).</p> <p>E.g.: A joint requires a total of 4.8 l foam liquids, i.e. 2.8 l liquid A and 2.0 l liquid B are measured.</p> <p>Regarding the total foam quantities contact LOGSTOR's technicians.</p>
Component overview/data	Component No. 0700

Other insulation methods - Can foam

Mixing cup

For minor quantities of foam 2 l mixing cups with volume marking are delivered:

Product No. 1L 1998 0000 036 564.

Product No. 2L 1998 0000 036 565.

In connection with major foam quantities 10 l buckets etc. are used.

**Component
overview/data**

Component No. 1998

Other insulation methods - Machine foam

Application	<p>When foaming joints it is advantageous to use machine foam when large foam quantities will be filled e.g. into large transmission lines</p> <p>However, the application of machine foam requires passable space along the trench.</p> <p>To use the foam machine a specific education is required.</p>
Description	<p>Foam liquids for machine foam, delivered in accordance with LOGSTOR's specifications, comply with the required strength and insulation properties like the foam pack does.</p> <p>If LOGSTOR is not involved in the installation work, LOGSTOR does not give any guarantee for correct dosage and implementation.</p>
Component overview/data	<p>Component No. 0700</p>
Materials	<p>Polyol and isocyanate must be purchased according to LOGSTOR's specifications and from recommended suppliers.</p> <p>For further information contact your local LOGSTOR contact person.</p>

LOGSTOR Detect Overview

Description

Please refer to the Surveillance Manual, which is available on our website www.logstor.com.

The Surveillance Manual describes segment choice, surveillance principles, wiring and reference points, active and passive surveillance system, components choice, jointing, LOGSTOR Hosting and Stand-Alone, service, documentation as well as connection to existing systems.

As regards installation please refer to Handling & Installation.

Contents	Laying - FlexPipes

Hot tapping tools

Hot tapping tool

Available for dimensions DN 20-100 mm.

To buy or hire please contact LOGSTOR Service Department.

**Component
overview/data**

Component No. 9050

Tools for shortening and calibration

Eclipse saw

An eclipse saw with depth guard is used to cut outer casings and insulation.

The depth guard prevents that the service pipe and surveillance wires are damaged, when cutting the outer casing.

To shorten insulation shells the eclipse saw is used without depth guard.

Sealing tape in coils

Product No.	Dimension mm	L m
5435 0040 008 104	40 x 1.0	30
5430 0040 003 000	40 x 3.0	30

Application For jointing, post-installation, and repairs a number of shrink materials for various purposes are delivered.

Shrink wrap A shrink wrap is an open joint which is used to obtain an additional seal e.g. of SX-WPJoint and BXJoint.

The shrink wrap is with mastic and hot-melt.

The shrink wrap is delivered cut to measure for the dimension with 2 bevelled corners in order to ensure sealing against outer casing and casing joint.

Is delivered with closure patch.

Shrinkability: 25%

Shrink wrap

Outer casing mm	Width mm
77-355	155
400-710	230
800-1400	300

From the table it appears which widths are used as open wraps for different outer casing dimensions.

Accessories

Shrink materials

Shrink wrap set

Shrink wrap is available in the following widths incl. closure patch.

Component
overview/data

Component No. 5400

Closure patch for shrink wrap

Shrink wrap width mm	Closure patch width mm	Closure patch length mm
155	100	153
230	150	200
300	200	298
640	100	638
900	100	898

Shrink wrap in
coils

Shrink wrap is also available in coils.

Component

Accessories
Shrink materials

Shrink film

A shrink film is used for the first seal of outer casing joints.

Must always be covered by a wrap or a casing joint.

Shrinkability: 20%

Width of shrink film: 550 mm

Closure patch is not used for shrink film.

Component
overview/data

Component No. 5325

Shrink film

Accessories

Shrink materials

Shrink wrap for
T-joint

Shrink wrap for T-joint is with mastic.

The shrink wrap is delivered cut to measure for the dimension and with a hole for one or two branches.

Two corners are bevelled to ensure sealing against the outer casing and the T-joint.

Is delivered with closure patch.

Shrinkability: 30%.

Dimensions

Shrink wrap for T-joint is available in 2 widths dependent on the length of the base pipe of the T-joint.

Ordered to measurements and with hole(s) for one or two branches.

Component
overview/data

Component No. 5405

Shrink wrap for T-joint

Shrink wrap width mm	T-joint width mm	Closure patch length mm
650	400	100x648
900	600-700	100x898

Accessories

Shrink materials

Shrink collar

A shrink collar is primarily used to seal outer casings joints on flexible pipes.

Shrink collars are with mastic.

Sleeve length:

ø 77-315 mm = 150 mm

ø 355-630 mm = 225 mm

Component overview/data

Component No. 5500

5514 Shrink tape,
NW 1230

Shrink tape repairing Flex PE-casing.

Wind minimum 2 layers of shrink tape around the flexible outer casing and shrink them onto the outer casing.

Measurements: L = 10 m

Tape is available in two variants.

Anti-corrosion tape - grease tape

Product No.	Application	Type	Measurements
1997 0100 061 018	Used to protect steel pipes e.g. when using 2 wall entry sleeves in connection with a house entry	Denso - FEU or Densyl TDC	100 mm x 10 m

Accessories

Warning tape

Application Uncoil the warning tape over the pipes e.g. on the compressed, minimum 10 cm thick sand layer which must cover the pipes

Two types of warning tape are available:

- a narrow one for small pipe dimensions (possibly a tape over each pipe)
- a wider tape in net shape for major dimensions

PUR-foam layer

For foaming at service pipe temperatures $< +10\text{ }^{\circ}\text{C}$ or $> +50\text{ }^{\circ}\text{C}$ a layer of PUR-foam around the service pipe is installed before foaming.

Description

5 mm thick cross-linked polyethylene foam.

Product No. 9000 0000 023 156.

W x L = 420 mm x 25 m

**Component
overview/data**

Component No. 9000

Materials

Cross-linked polyethylene foam with closed cells.
